**What are the healthiest carbs to eat?** Examples of complex carbs include starchy vegetables (white and sweet potatoes, peas, corn), legumes (beans, lentils), and whole grains. Choose these carbs to get the most nutrition with the least impact on blood sugar.

**What happens if I eat no carbs for 2 weeks?** Low energy: Carbs are your body's primary source of energy. Therefore, a no-carb diet may lead to low energy and fatigue. Insufficient nutrients: A no-carb diet may not provide enough vitamins and minerals, such as potassium, B vitamins, and vitamin C, which are abundant in fruits, vegetables, and other plant foods.

**Are potatoes healthier than rice?** Of rice, pasta, potatoes, and bread, potatoes are the healthiest of these starchy and complex carbohydrate foods. This is because potatoes are dense in nutrients, containing essential minerals, vitamins, and other micronutrients. Potatoes are also high in fiber, helping to satiate hunger and regulate

blood sugar.

**What are the symptoms of carbohydrate deficiency?** Your body can store extra carbohydrates in your muscles and liver for use when you're not getting enough carbohydrates in your diet. A carbohydrate-deficient diet may cause headaches, fatigue, weakness, difficulty concentrating, nausea, constipation, bad breath and vitamin and mineral deficiencies.

**What breaks down carbohydrates?** Carbohydrate digestion begins in the mouth, where salivary amylase starts the breakdown. After breaking down throughout the digestive system, monosaccharides are absorbed into the bloodstream. As carbohydrates are consumed, the blood sugar levels increase, stimulating the pancreas to secrete insulin.

**What happens first when carbohydrates are eaten in excess?** If people consume more carbohydrates than they need at the time, the body stores some of these carbohydrates within cells (as glycogen) and converts the rest to fat. Glycogen is a complex carbohydrate that the body can easily and rapidly convert to energy. Glycogen is stored in the liver and the muscles.

**What is the FDA recommendation for carbohydrates?** The Daily Value for total carbohydrate is 275 g per day. This is based on a 2,000 calorie daily diet— your Daily Value may be higher or lower depending on your calorie needs.

**WHO guidelines for carbohydrate intake?**
