What is the rule number 1 of diving? 1. Never hold your breath. This is undoubtedly by far the most crucial of all safety rules for diving because failure to adhere could result in fatality.

What is the 1 3 rule in diving? In technical diving, the 1/3 Rule ensures divers have enough gas for the descent, return, and emergencies. It divides the total gas supply into three parts: one-third for the descent and exploration, one-third for the return, and one-third as a reserve, enhancing safety in challenging environments.

What is a 101 in diving? For example, 101 is a forward dive; a 102 is a forward somersault 5331D is a reverse twisting dive with one-and-a-half somersaults and one-half twist. After the number is called, each dive has a specific body position that the diver may select.

What is the scuba divers code? As a Responsible Diver - I pledge to: 1. DIVE COMPETENTLY - Always dive within my training, certification, experience, comfort and ability. 2. MAINTAIN APPROPRIATE DIVER HEALTH - Including appropriate fitness, physical health and mental awareness to dive.

What is the No 1 rule in freediving? 1. Never freedive alone. Select an evenly matched partner who will be your safety diver and familiar with the safety and rescue procedures and is able to render assistance if required. Dive under direct observation of your dive buddy.

What is the 120 rule in diving? Knowing the maximum time allowable against the maximum depth indicated on a depth gauge makes for a safe dive. There is an old and questionably reliable rule, known as the "120 Rule" that says if you subtract your max depth from 120, you'll get your no-deco time.

What is the golden rule of diving? Boyle's Law is important to a diver because it means that if a diver takes a lungful of air while he is underwater, that air will expand in his lungs as he rises to the surface. If he holds his breath, the expanding air can rupture his lungs. So the golden rule of diving is: Never hold your breath!

What is the 3r rule diving? To ensure that there is extra air, that "just in case" air, which might be needed on the dive, technical divers came up with what is now well known as the rule of thirds. This rule states that there is 1/3 going in, 1/3 coming out, and 1/3 that is reserve in case of an emergency.

What is the 2nd rule of scuba? Rule #2: Do a safety stop You should do a safety stop if you are diving deeper than 10 meters. You can do that when you reach the first 5 meters. Wait for 3 minutes before proceeding. This is done so that the nitrogen levels in your blood are lowered and your body adapts to the changes in pressure.

What is ABC in diving? ABC Acronym (Air, Buoyancy, Clips) Commonly referred to as the ABC's pre-dive safety check system, the letters refer to air, buoyancy, and

clips.

What is 1 atm in diving? Pressure and Gases The weight of the atmosphere exerts a pressure of 14.7 pounds per square inch of force at sea level. This is to say that a 1 inch column of air as tall as the atmosphere, would weigh 14.7 pounds. We commonly call this 1 Atmosphere of pressure, or 1 ATM.

What does DD mean in diving? Degree of Difficulty & Scoring. To further complicate the number game, each dive is given a specific degree of difficulty (DD). Olympic Gold. For example, a 101A (forward dive straight) has a degree of difficulty of 1.4, but a 101C (forward dive tuck) has a DD of 1.2.

What is a BCD in diving? Imagine scuba diving while hovering, weightless underwater – eye to eye with a fish. How is it possible? It starts with your buoyancy control device (BCD). A BCD does exactly what its name describes – it gives you control in the water. Sometimes you want to float on the surface comfortably.

What is CPR in diving? The CPR technique combines mouth-to-mouth respiration that provides oxygen to the person's lungs and cardiac compressions help keep the blood oxygenated, allowing circulation and thus restoring breathing and heart palpitations. Diving certifications full of care and fun.

What is the B in scuba? The acronym S.C.U.B.A stands for Self-Contained Underwater Breathing Apparatus, and was coined by Dr Christian Lambertsen in 1954 – a new name for his earlier invention, the Lambertsen Amphibious Respiratory Unit (LARU).

What is the number one rule in scuba diving? Always breathe continuously. Never hold your breath. As I mentioned earlier, this is arguably the “number one rule” of scuba because breath holding while scuba diving can lead to serious injury, even death.

What is the 2nd rule of scuba? Rule #2: Do a safety stop You should do a safety stop if you are diving deeper than 10 meters. You can do that when you reach the first 5 meters. Wait for 3 minutes before proceeding. This is done so that the nitrogen levels in your blood are lowered and your body adapts to the changes in pressure.

What is the diving rule? In scuba diving, the rule of thirds is a rule of thumb used by divers to plan dives so they have enough breathing gas remaining in their diving cylinder at the end of the dive to be able to complete the dive safely.

What is the rule of 6 diving? One dive must come from each of the five categories (forward, back, reverse, inward, twisting). Men may repeat one of the categories for their sixth dive. Women cannot repeat any.

Do manuals last longer than automatics? Manual transmissions require less servicing to remain functional and don't need the same type of oil as an automatic transmission. Cars with a stick-shift usually last longer than an automatic of the same make and model.

Why are manuals cheaper? Although manual transmission vehicles are getting harder to find, they often remain cheaper to purchase and repair because they tend to be simpler to produce. Learn more about the difference between manual and automatic transmissions.

Which car to prefer manual or automatic? If you do a lot city driving, an automatic may be easier to maneuver through stop and go traffic than a standard transmission. However, if performance and the driving experience matters to you, you might want to consider a manual. Another factor to keep in mind is if there'll be other people driving the vehicle.

Does auto or manual use more fuel? The fuel efficiency of a car depends on several factors, including the engine's size, the weight of the car, driving style, and the gearbox type. Generally speaking, automatic cars are slightly less fuel-efficient than manual cars.

Which transmission is best for a car? That depends on your needs and driving habits. If you want something simple that's easy to use, go with an automatic transmission. If you want better fuel economy, consider a CVT. And if you prefer the traditional driving experience, go for manual transmission.

Why is auto more expensive than manual? You can move up or down the gears as and when you choose. This gives the driver more control when speeding up or slowing down. Manual cars are usually less expensive than automatics due to using less complex equipment in their transmission. This also translates into lower transmission repair costs, too.
