**Are diesel cab heaters safe?** Diesel heaters are widely used and considered to be very safe. They include an auto-shutdown if the system temperature exceeds a safe operating level, the same as LPG heaters. Where diesel heaters provide extra safety is in regards to combustion and inhalation.

**Do diesel heaters use a lot of electricity?** The heater's power use will depend on its size, but generally, diesel heaters will use 8 to 12 amps during start-up, with some models then requiring as little as 0.5 amps to run continuously, and an average of 1-2 amps.

**Are diesel heaters efficient?** Through a combination of superior fuel properties, sophisticated design, and smart control systems, diesel heaters are able to offer better combustion efficiency and effective heat transfer, making them a highly efficient heating solution compared to propane alternatives.

**Is it safe to sleep with a diesel heater on?** For those who are spending the night on the road or at sea, not only is our diesel heater safe to use while operating the vehicle or vessel but it can also be used while you sleep as there is no possibility of carbon monoxide poisoning.

To that end, a lot of campers opt to use a portable battery, also known as a power station or solar generator, to power their heater.

**What size battery do I need for a Chinese diesel heater?** Most caravans have a battery between 60 - 110 Ah, so one would expect that size battery would run the unit, but I know with narrow boats 400 Ah of battery still needed to have a shore supply once a month as there is not enough engine running time to fully recharge them, and it needed 4 mm cable to minimise the volt ...

**Do diesel heaters use much electric?** The heater uses very little battery power when running at temperature, but uses a lot on startup, heating up the glow plug. To use it economically it is best to leave it running and adjusting the heating level up and down, rather than switching the heater off and restarting .
