What are cooler areas on the surface of the photosphere that appear darker than the surrounding areas of the Sun? Sunspots appear dark because they are cooler than their surroundings. Large sunspots are thousands of degrees cooler than

the areas that surround them (about 4,200 °C for a sunspot compared to 6,000 °C for the photosphere surrounding it). Sunspots are only dark in contrast to the bright face of the Sun.

How does the Sun's radiative zone compare with the convective zone? In the convection zone, the energy acquired is transferred and distributed evenly in the other outer layers of the Sun by convection. The radiation zone of the Sun only radiates the heat from the core to the outer layer of the Sun without transferring the matter.

What is the most of the Sun's energy is a result of question blank 1 of 1? The source of energy of the Sun is due to the conversion of hydrogen to helium. Solar energy is created as a result of a process known as Nuclear Fusion, a chain reaction that takes place in the Sun.

Which statement describes the motion of planets in their orbits around the Sun? Kepler's First Law: each planet's orbit about the Sun is an ellipse. The Sun's center is always located at one focus of the orbital ellipse. The Sun is at one focus. The planet follows the ellipse in its orbit, meaning that the planet to Sun distance is constantly changing as the planet goes around its orbit.

What are dark cooler areas on the Sun's surface called _____? Sunspots are areas that appear dark on the surface of the Sun. They appear dark because they are cooler than other parts of the Sun's surface.

What are darker coolest areas of the Sun that appear in pairs on the photosphere? Sunspots are temporary spots on the Sun's surface that are darker than the surrounding area. They are regions of reduced surface temperature caused by concentrations of magnetic flux that inhibit convection. Sunspots appear within active regions, usually in pairs of opposite magnetic polarity.

What is directly above the convective zone is the visible surface of the Sun known as? the photosphere - the visible "surface" of the Sun. the sunspots - dark areas on the photosphere, which are cooler than the surroundings. the various phenomena in the atmosphere, like "flares" and "prominences" the convective zone - the uppermost "layer" of the Sun's interior.

Where is the convective zone of the Sun located _____? The convection zone is the outer-most layer of the interior. It extends from a depth of 200,000 km up to the visible surface of the Sun. Energy is transported by convection in this region. The surface of the convection zone is where light (photons) is created.

What is the radiative layer _____ the convective layer in the Sun? The radiative zone is the transition between the core and the convective zone and extends about two-thirds of the way to the Sun's surface.

How is the amount of energy an area receives affected by the suns? The Sun's energy warms Earth. Not all areas on Earth's surface receive the same amount of energy from the Sun. The amount of energy an area gets depends on the Sun's angle.

How does most of the energy from the Sun travel to Earth's surface? Most of the Sun's energy reaching Earth includes visible light and infrared radiation but some is in the form of plasma and solar wind particles. Other forms of radiation from the Sun can reach Earth as part of the solar wind, but in smaller quantities and with longer travel times.

Where does the Sun's direct rays of energy hit the most? The equator gets the most direct sunlight year-round. The angle of sunlight hitting the equator is more direct than it is at the poles, so the poles receive less direct sunlight.

How does gravity affect the solar system? Gravity is what holds the planets in orbit around the sun and what keeps the moon in orbit around Earth. The gravitational pull of the moon pulls the seas towards it, causing the ocean tides. Gravity creates stars and planets by pulling together the material from which they are made.

How does gravity affect a planet's velocity as it gets closer to the Sun? The closer a planet is to the Sun, the stronger the Sun's gravitational pull on it, and the faster the planet moves. The farther it is from the Sun, the weaker the Sun's gravitational pull, and the slower it moves in its orbit.

What does the period of revolution of planets around the Sun depend on? The time period (T) of revolution of the planet depends upon the radius of the orbit (r),

mass of the sun (M) and the gravitational constant (G).

What is a cooler area on the surface of the Sun looks darker? Sunspots are dark, planet-size regions of strong magnetic fields on the surface of the sun. They can spawn eruptive disturbances such as solar flares and coronal mass ejections (CMEs). These regions of the sun appear darker because they are cooler than their surroundings.

What is a cooler dark area of the photosphere? Sunspots-a dark area of the photosphere of the sun that is cooler than the surrounding areas and that has a strong magnetic field. The movements of gases within the sun's convective zone and the movements caused by the sun's rotation produce magnetic fields.

What are the cooler regions on the photosphere? There is some variation in temperature from place to place within the photosphere – for example, sunspots are relatively “cool” regions with temperatures as low as 3,000 °C (5,400 °F).

What are areas on the Sun's surface that are cooler than the surrounding area called? These dark spots that they saw are now called sunspots. Sunspots are in areas located on the surface of the sun that are cooler than the surrounding areas.

What is Rawls political philosophy summary? Rawls's theory of "justice as fairness" recommends equal basic liberties, equality of opportunity, and facilitating the maximum benefit to the least advantaged members of society in any case where inequalities may occur.

What are the three principles in John Rawls' theory? The first principle is often called the greatest equal liberty principle. Part (a) of the second principle is referred to as the difference principle while part (b) is referred to as the equal opportunity principle. Rawls orders the principles of justice lexically, as follows: 1, 2b, 2a.

What are the main points of Rawls' theory of justice? That means every person should be treated with fairness and recommends equal basic liberties, equal opportunities to similar individuals, and offering the highest possible benefits to the less advantaged members of society. This theory of justice, as believed by Rawls, helps in the functioning of a just society.

What are Rawls 2 principles of justice? Rawls argues that the two principles that would be reached through an agreement in an original position of fairness and equality are 1) each person is to have an equal right to the most extensive basic liberty compatible with a similar liberty for others and 2) social and economic inequalities are to be arranged so ...

What is Rawls main idea? Rawls argued that only under a "veil of ignorance" could human beings reach a fair and impartial agreement (contract) as true equals not biased by their place in society. They would have to rely only on the human powers of reason to choose principles of social justice for their society.

What are the two moral powers Rawls? For Rawls, something qualifies as a basic liberty if and only if bears the right relationship to our "two moral powers": a capacity to form a sense of the good life and a capacity for a sense of justice.

What did Rawls believe in? John Rawls (b. 1921, d. 2002) was an American political philosopher in the liberal tradition. His theory of justice as fairness describes a society of free citizens holding equal basic rights and cooperating within an egalitarian economic system.

What defines a good society according to Rawls? Here, Rawls introduces the notion of a society being well ordered. A well-ordered society is a society in which we all accept the same principles of justice and, moreover, our society's basic institutions are regulated by these principles. To be an ideal society, Rawls argues, is also to be a well-ordered society.

What did John Rawls believe about the economy? In his estimation, the only morally acceptable economic systems are democratic socialism (in which "the means of production are owned by society") or "property-owning democracy" — a market economy in which government continually intervenes to ensure widespread dispersal of capital ownership.

Why is political philosophy important? The political philosophy is important because it allows to critically examining the political decisions and policies of a society. It provides a comprehensive understanding of the matters like justice, liberty, freedom and equality. It enhances the critical reflective attitudes of the students.

What is an example of the difference principle Rawls? The idea is that different rules will have different distributive effects. For example, rules restricting the supply of doctors will make most people worse off while making some much better off. Rules allowing private property make everyone much better off and some better off than others.

Is John Rawls a utilitarian? Rawls takes the basic structure of society as his subject matter and utilitarianism as his principal opponent. Part One of TJ designs a social-contract-type thought experiment, the Original Position (OP), and argues that parties in the OP will prefer Justice as Fairness to utilitarianism and various other views.

What are the weaknesses of Rawls' theory of justice? Rawls' theory of justice is often criticized as idealistic due to its emphasis on ideal theory, which assumes perfect compliance with justice rules. Ideal theory in Rawls' work serves as a target for guiding non-ideal theorizing, comparing injustices, and establishing a model of fairness.

What is an example of Rawlsian ethics? So, for example, Bill Gates can earn whatever money he wants but only on the condition that a part of his income would, in the form of taxes, benefit those who lack the skills that he is blessed with. Rawls further says that those in a better position can never think that they deserve what they have.

What is the purpose of the veil of ignorance? Abstract. The “veil of ignorance” is a moral reasoning device designed to promote impartial decision making by denying decision makers access to potentially biasing information about who will benefit most or least from the available options.
