## **Standard Raven Matrices Test Manual**

### **What is the Standard Raven Matrices Test?**

The Standard Raven Matrices Test is a nonverbal intelligence test that measures abstract reasoning and problem-solving abilities. It consists of 60 multiple-choice items that gradually increase in difficulty. Each item presents a matrix of abstract patterns, with one pattern missing. The test-taker must identify the missing pattern from a set of eight options.

### **Who is the Standard Raven Matrices Test designed for?**

The Standard Raven Matrices Test is designed for individuals aged between 5 and 90+. It is commonly used to assess cognitive abilities in a variety of settings, including educational, clinical, and occupational.

### **How does the Standard Raven Matrices Test work?**

The Standard Raven Matrices Test is administered individually or in groups. The test-taker is given a booklet containing the 60 items. They are instructed to work through the items at their own pace, but they are not allowed to use any aids or resources. The time taken to complete the test is not measured.

### **How are the scores interpreted?**

---

The scores on the Standard Raven Matrices Test are interpreted in terms of percentiles. A percentile score indicates the percentage of individuals in the same age group who score at or below the test-taker's score. A score of 50th percentile indicates that the test-taker performed as well as or better than half of the individuals in their age group.

### **How reliable and valid is the Standard Raven Matrices Test?**

The Standard Raven Matrices Test has been shown to be reliable and valid in numerous research studies. It has high internal consistency, meaning that the items on the test measure the same underlying construct. It also has good test-retest reliability, meaning that individuals who take the test on two different occasions tend to get similar scores. The Standard Raven Matrices Test has also been shown to be correlated with other measures of intelligence, such as the Wechsler Adult Intelligence Scale.
