UK Fuel Market Review: Key Findings from the RAC Foundation

The RAC Foundation, a leading UK transport research organization, has recently released its annual Fuel Market Review, providing valuable insights into the dynamics of the sector and its impact on consumers. Here are some key questions and answers from the report:

1. What are the main factors influencing fuel prices in the UK?

Fuel prices in the UK are primarily driven by global crude oil prices, which are determined by supply and demand dynamics. Other factors include the strength of the pound sterling against the US dollar, as oil is traded in dollars, and taxation.

2. How have fuel prices changed over the past year?

Fuel prices have risen significantly in the UK over the past year. In March 2022, the average price of petrol was 148.02 pence per liter, while diesel was 151.57 pence per liter. By March 2023, these prices had increased to 185.04 pence per liter and 191.26 pence per liter, respectively.

3. What are the implications of rising fuel prices for consumers?

Rising fuel prices have a significant impact on consumers, particularly those who rely on their vehicles for work or personal use. The RAC Foundation estimates that the average UK household will spend an additional £200 on fuel in 2023 compared to the previous year. This can put a financial strain on families and businesses alike.

4. What can be done to address the issue of rising fuel prices?

There is no easy solution to the problem of rising fuel prices, but there are several measures that could be considered. These include reducing fuel duty, increasing

supply by encouraging domestic production or exploring alternative sources, and investing in public transport to reduce the reliance on private vehicles.

5. What is the RAC Foundation's outlook for the UK fuel market?

The RAC Foundation predicts that fuel prices will remain high in the UK in the short-term, with little relief expected for consumers. However, the organization notes that there is potential for prices to fall later in the year if global crude oil prices decline.
