**What does ETRTO mean in tires?** ? Copy link. The sizes of bicycle tires are now designated according to the European tire and rim standard ETRTO (European Tire and Rim Technical Organization).

**What is the full form of ETRTO standards?** European Tyre and Rim Technical Organization.

**What size tyres are ETRTO 622x19?** The ISO/ETRTO 622 is the same as 700c, and both rims are the same 622mm diameter. The 622x19 indicates a 19mm inside width rim. You can measure the width of the rear rim. The 37x622 on the tire indicates a nominal 37mm wide tire.

**What size tire is 42-622?**

**Is 622 the same as 700C?** The 700c (622 mm / 29 inches) is the most common wheel size for road racing. The 650b (584 mm / 27.5 inches) wheel size is used in specific areas. Each wheel size offers unique advantages for different kinds of riding.

**What is 700x35c mean?** French size markings (e.g. 700 x 35C) give the approximate tire outer diameter (700 mm) and width (35mm). The letter at the end indicates the inner diameter of the tire.

**What is ISO ETRTO tire size?**

**What is 27.5 to ETRTO?**

**What is 700C and 650b?** 650B wheels are smaller in diameter than 700C wheels with an inner tire diameter exactly 38 mm less (622 mm vs 584 mm, see table above). Common sense or rudimentary physics tells us that it is easier to accelerate

a very small wheel than a very big one, so this hypothesis should hold true.

**Is 622x19 700C?** The 622x19 spec is what you need to pay attention to. 622 is the diameter of the rim bead seat in mm. 19 is the inner width of the rim in mm. Look at your tires, if they are marked 'ISO 622' or 'ETRTO 622' or '700C' (an French system label that is the same as ETRTO/ISO 622), then they are 622mm diameter.

**What does 700C mean?** The term “700c” is the tire size according to the French system. The “700” is stating the diameter of the bicycle tire and “c” is the width size of the tire. However it's not 700 millimeters it's 633 millimeters.

**Can I put 55 tires instead of 45?** What happens if wheels are different sizes. In a front- or rear-wheel-drive vehicle, as long as both rear wheels are the same and both front wheels are the same and the suspension geometry is set up to accommodate this, the vehicle will operate fine.

**What is ETRTO size?** In Europe the following methods are used to indicate the tyre size: The size in mm according to the European ETRTO standard, for example 47—622, where the first number indicates the width of the inflated tyre and the second the inside diameter in mm.

**Is 700x35c the same as 37 622?** So in this case you have a 37mm wide tyre that fits a 622mm rim designed to replace tyres marked 700x35c. Of course it will also fit where tyres are marked variations of 28 x 1 3/8 to 1 5/8 if you happen to have old ones.

**Are 700C and 29 the same?** Will a 29 inch tire fit a 700C rim? While technically the same ISO size and inner diameter, most 29” tires won't fit a 700C rim. 29” mountain bike tires are much wider than 700C tires, so they can't be installed on narrow road bike rims designed for skinny, low-volume tires.

**Is 25 622 the same as 700x25c?** 25-622 is the International Standardization Organization (ISO) way of identifying the 700x25c tire in the example above.

**Is 622 a 29er?** 29ers or two-niners are mountain bikes and hybrid bikes that are built to use 700c or 622 mm ISO (inside rim diameter) wheels, commonly called 29? wheels.

**What is 40 622 mean?** 40–622 means that tires are made to fit rims that are 40 mm wide. Your rims might be 38 mm wide and probably can handle slightly wider or narrower tires. But the frame of the bike will also need to be considered to be sure there is clearance for wider tires.

**What does 700x40c mean?** The two markings indicate the tire size both in ETRTO (European, mm) and inches. First value is the Diameter (700 and 28in) and the second one the tire width (40c and 1–5/8in). Easiest way is to look at the mm (700x40c). The tube shall have a range that covers your tire width.

**Is 700cc the same as 28?** The wheel sizes 28", 700C and 29er or 29" all refer to the same rim size: ETRTO 622. The tyres can differ, but the 28", 700C and 29er are all the exact same rim diameter. The 700 markings will be followed by the width in mm, and the 28 or 29 markings will be followed by the width in inches.

**Is 622 700c? 29? / 700c (ISO 622 mm)** Here we have two more common wheel sizes that are in fact, exactly the same! The standard modern road bike wheel has an ISO diameter of 622 mm and is referred to as 700c (makes sense, right? /s).

**What does ETRTO 622x19 mean?** The 622x19 spec is what you need to pay attention to. 622 is the diameter of the rim bead seat in mm. 19 is the inner width of the rim in mm. Look at your tires, if they are marked 'ISO 622' or 'ETRTO 622' or '700C' (an French system label that is the same as ETRTO/ISO 622), then they are 622mm diameter.

**What does ETRTO 37-622 mean?** The ETRTO size specification 37-622 indicates the width of 37 mm and the tire inner diameter of 622 mm. This dimension is clear and allows a precise classification of the rim size. The inch marking (e.g. 28 x 1.40) states the approximate outer diameter (28 inches) and the tire width (1.40 inches).

**Can I put 55 tires instead of 45?** What happens if wheels are different sizes. In a front- or rear-wheel-drive vehicle, as long as both rear wheels are the same and both front wheels are the same and the suspension geometry is set up to accommodate this, the vehicle will operate fine.
