## **Two-Way Relative Frequency Table**

A two-way relative frequency table is a statistical table that displays the relative frequencies of the joint occurrence of two categorical variables. It is used to analyze

the relationship between the two variables.

**Question 1: What is a two-way relative frequency table?**

Answer: A two-way relative frequency table is a statistical table that displays the relative frequencies of the joint occurrence of two categorical variables. It is used to analyze the relationship between the two variables.

**Question 2: How is a two-way relative frequency table constructed?**

Answer: A two-way relative frequency table is constructed by first creating a contingency table, which shows the counts of the joint occurrences of the two variables. The relative frequencies are then calculated by dividing each count by the total number of observations.

**Question 3: How is a two-way relative frequency table used to analyze the relationship between two variables?**

Answer: A two-way relative frequency table can be used to analyze the relationship between two variables by examining the patterns in the relative frequencies. For example, if the relative frequency of one category of one variable is significantly different from the relative frequency of the same category in another variable, this may indicate that the two variables are related.

**Question 4: What are the advantages of using a two-way relative frequency table?**

Answer: A two-way relative frequency table is a simple and easy-to-understand way to analyze the relationship between two categorical variables. It can also be used to calculate other statistical measures, such as the chi-square statistic, which can be used to test for statistical significance.

**Question 5: What are the limitations of using a two-way relative frequency table?**

Answer: A two-way relative frequency table can only be used to analyze the relationship between two categorical variables. It cannot be used to analyze the relationship between a categorical variable and a continuous variable, or between two continuous variables.
