**Which is better a remanufactured or rebuilt engine?** A remanufactured engine is a more extensive machining job than rebuilding, because the engine is pulled out of the vehicle and returned to factory conditions and blueprint specifics. Everything that has any potential wear is replaced to bring the engine back to its original standards.

**Is it cheaper to build an engine or buy a crate engine?** Crate engines are often the more affordable option over a purpose-built engine, even though the initial sticker price might make you think otherwise. Some still think a rebuild is cheaper than a crate engine.

**What's the difference between a crate engine and a rebuilt engine?** While crate engines are brand-new and come fully assembled, rebuilt engines are used engines that have been disassembled, cleaned, and reassembled with some new parts.
