Understanding Options: A Comprehensive Guide by Michael Sincere

Q1: What are options contracts? A: Options are financial contracts that give the buyer the right, but not the obligation, to buy or sell an underlying asset at a predetermined price (the strike price) on or before a specific date (the expiration date).

Q2: Who buys and sells options? A: Options are typically traded by investors seeking to manage risk, speculate on price movements, or generate income. Option buyers purchase the right to buy or sell, while option sellers grant that right and receive a premium in exchange.

Q3: What is call option? A: A call option gives the buyer the right to buy an underlying asset at the strike price. If the asset price rises above the strike price, the option gains value.

Q4: What is a put option? A: A put option gives the buyer the right to sell an underlying asset at the strike price. If the asset price falls below the strike price, the option gains value.

Q5: How to calculate the value of an option? A: The value of an option is determined by several factors, including the underlying asset's price, time to expiration, strike price, volatility, and interest rates. Option pricing models, such as the Black-Scholes formula, can be used to estimate the fair value of an option.
