## [Download Complete File](#)

**Was kann man alles mit Chilis machen?** Trocknen Sie die geernteten Schoten entweder an der Luft (am besten in Heizungsnahe), in einem Dörrgerät oder bei maximal 50° C im Backofen. Die getrockneten Chilis lassen sich hervorragend zu Pulver mahlen. Aber auch als ganze Schoten bleiben sie trocken und dunkel gelagert viele Monate haltbar.

**Was kann ich mit frischen Chilis machen?** Frieren Sie eine oder mehrere Chilis ein, legen Sie sie ein, trocknen Sie sie oder verwandeln Sie sie in ein scharfes, würziges Öl, das ewig hält. Es gibt so viel, was Sie damit machen können! Das Einfrieren frischer Chilis könnte nicht einfacher sein. Packen Sie Ihre Reste einfach in einen wiederverwendbaren Gefrierbeutel oder eine Plastikbox und bewahren Sie sie in der obersten Schublade Ihres Gefrierschranks auf.

**Sind frische Chilis gesund?** Da Chilis viel Vitamin A und C enthalten, sind sie schon allein deshalb gesund. Die Schärfe kann sich aber ebenfalls positiv auf unseren Körper auswirken: Schärfe steigert die Magensaftsekretion, die Verdauung wird angekurbelt.

**Wie frische Chilis aufbewahren?** Chili lagern und haltbar machen Frisch geerntete Chilis lagern Sie am besten im Kühlschrank. Die Schoten sollten dabei am besten offen und nicht in einem geschlossenen Behälter sein, da sich sonst Kondenswasser und daraufhin Schimmel bilden kann. Im Kühlschrank halten sich die frischen Chilis mehrere Wochen.

**Was macht man mit zu viel Chili?** Mehr Fett: Fett bindet die Stoffe, die dein Essen scharf machen. Am besten nutzt du dazu Milchprodukte wie Sahne, Schmand oder Joghurt. Aber auch vegane Produkte wie Kokosmilch oder neutrales Speiseöl eignen

sich dafür. Weniger Fett: Ist dein Essen schon fettreich, kann es helfen, das Fett einfach abzuschöpfen.

**Was tun mit frischen Chilis?** Chilischoten können Sie einfrieren, trocknen und frisch zu appetitlichen Happen verarbeiten. Beim Trocknen wird der Geschmack der Chilis intensiver. Durch Einfrieren verlieren Chilis ihr festes Fruchtfleisch, doch Vitamine und Mineralien bleiben gut erhalten. Chilis lassen sich frisch zu scharfen Häppchen verarbeiten.

**Wie bewahrt man überschüssige Chilis auf?** Das Trocknen von Chilis ist die beste Methode, um überschüssige Chilis aufzubewahren, insbesondere wenn Sie einen sehr üppigen Chili-Strauch haben! Wenn die Saison auf ihrem Höhepunkt ist, füllen wir den Ofen und den Dörrapparat mit Chilis und stellen unsere eigenen Chiliflocken und Chilipulver her, die wir für den Rest des Jahres verwenden.

**Kann man grüne Chilis statt roter verwenden?** Obwohl grüne Chilis im Allgemeinen eine mildere Schärfe aufweisen als rote Chilischoten, beeinflussen sie den Geschmack des Gerichts über die reine Schärfe hinaus stärker, da sie schärfer und weniger süß sind als rote Chilischoten.

**Kann man unreife Chilis verwenden?** Manch einer stellt sich dann die Frage: „Sind unreife Chilis essbar?“ Dazu ein paar schnelle Antworten: Unreife Chilis sind nicht giftig und können roh verzehrt werden.

**Für welches Organ ist Chili gut?** Also: Chili ist gesund, in allen Formen und Mischungen! Das Capsaicin schützt zudem die Magenschleimhaut vor den Auswirkungen von Alkohol oder Aspirin, hilft, die Leber zu entgiften und die Blutfettwerte zu senken. Zudem gilt Chili sogar als Fat-Burner...!

**Ist Chili gut für den Darm?** Sowohl die Medizin, als auch die Naturheilkunde sind also regelrecht scharf auf Chili: Er verstärkt nämlich auch den Fluss der Speichel- und Magensäfte, sowie die Darmbewegung, was enorm verdauungsanregend wirkt. Es wird Freunde der scharfen Früchtchen freuen zu hören, dass Chili jede Mahlzeit bekömmlicher macht.

**Ist Chili gut für die Leber?** Ein besonderer Segen ist unser Capsaicin für die Leber: Es kann lebertoxische Stoffe abbauen, vor zukünftigen Belastungen schützen und

bestimmten Lebererkrankungen vorbeugen. Auch bei Diabetikern kann der Scharfstoff durchaus helfen, da ihm insulinspiegelsenkende Eigenschaften nachgesagt werden.

**Was mache ich mit meinen Chilis?** Sie eignen sich zum Sauce selbst machen, Trocknen und Chilipulver herstellen, zum Einlegen, Räuchern, Rösten, Einfrieren und sogar zum Kandieren.

**Kann man Chili roh einfrieren?** Chilischoten haben einen niedrigen Wassergehalt. Daher können sie bedenkenlos eingefroren werden. Es geht schnell und die Schoten verlieren weder an Aroma noch an Geschmack. Das einzige, was Du noch bedenken solltest: Die Knackigkeit der Schoten geht verloren.

**Kann man Chilis essen wenn sie noch grün sind?** Es stellt sich daher die Frage, ob man auch grüne Chilis essen kann. Diese Anleitung liefert die Antwort. Obwohl es sich bei Paprika und Chili (Capsicum) um Nachtschattengewächse handelt, sind generell auch unreife, also in der Regel grüne Paprika oder Chilis essbar und nicht giftig. Das gilt auch für den Rohverzehr.

**Wie konserviere ich frische Chilis?** Eine simple und sehr effektive Art, um Chilis zu konservieren, ist das Einlegen in Öl. Das macht die Chilis nicht nur haltbar, sondern auch sehr aromatisch. Allerdings konserviert hierbei nicht das Öl die Chilis, sondern schließt sie nur luftdicht ein.

**Was machen mit zu viel Chilischoten?**

**Welche Chili ist schärfer Rot oder Grün?** Tipp 2: Der richtige Erntezeitpunkt für scharfe Chilis Je länger die Schote an der Pflanze bleibt, je reifer sie also ist, desto schärfer wird sie. Grüne Schoten sind demnach deutlich milder als die ausgereiften gelben oder roten Schoten der gleichen Sorte.

**Was macht man mit geernteten Chili?**

**Wie kann man frische Chilischoten haltbar machen?**

**Werden Chilis schärfer wenn man sie trocknet?** Chilis ernten oder kaufen Reife Chilis schmecken ganz frisch geerntet höllisch gut. Beim richtigen Trocknen wird deren Aroma und Schärfe sogar noch intensiver.

---

**Wie lange kann man Chili hängen lassen?** Direkt nach dem Auspflanzen kann es sein, dass die Chilis leicht die Blätter hängen lassen. Das ist durchaus normal und sollte sich nach ein bis zwei Tagen legen.
