Costs can be classified as fixed (constant within a relevant range), variable (changes proportionally with activity), or mixed (a combination of fixed and variable).

Q: How can variance analysis be used to control costs?

This information can be used to improve cost management by investigating and correcting inefficiencies or errors. Positive variances indicate cost savings, while negative variances indicate excess costs.

Q: What are the key components of the master budget and how are they linked?

A: The master budget is a comprehensive financial plan outlining all aspects of a company's operations for a specific period. It includes the sales budget, production budget, direct materials budget, direct labor budget, manufacturing overhead budget, selling and administrative expenses budget, and cash budget. These components are interconnected, with each budget informing the next.

Q: Explain the role of capital budgeting in managerial accounting.

A: Capital budgeting involves evaluating long-term investments to determine their financial feasibility. Techniques such as net present value, internal rate of return, and payback period are used to analyze investment alternatives and make informed decisions about acquiring new assets or expanding operations.

Q: How can managerial accounting support strategic planning and decision-making?

A: Managerial accounting provides detailed information about a company's operations, financial performance, and market conditions. This information is essential for developing strategic plans, setting performance goals, making pricing decisions, and identifying opportunities for growth or improvement.
