**Which is the better Oxford Dictionary of Merriam-Webster?** Merriam-Webster is “synchronic,” meaning it concentrates on current, active vocabulary. The OED is “diachronic,” written from a historical perspective. The two philosophies are complementary, not opposed, but that often means a word has to be in use longer to make the OED than it might take to get into M-W.

**How many versions of the Oxford English Dictionary are there?** The Oxford English Dictionary was originally published in fascicles between 1884 and 1928. A one-volume supplement was published in 1933, and four further supplementary volumes were published between 1972 and 1986.

## **Sword Dancer, Tiger and Del: A Q&A with Jennifer Roberson**

### **Q: What inspired you to write "Sword Dancer, Tiger and Del"?**

**A:** The novel was inspired by my love of swordplay, martial arts, and the mythology of ancient cultures. I wanted to create a world where the skilled warrior was not only respected but revered, and where women could be just as deadly as men.

**Q: The characters of Del, Sword Dancer, and Tiger are all incredibly well-developed. How did you approach their creation?**

**A:** I spent a great deal of time thinking about each character's background, motivations, and relationships with others. I wanted them to feel like real people, with flaws and complexities, rather than simply archetypes.

**Q: The fight scenes in "Sword Dancer, Tiger and Del" are both brutal and beautiful. What was your process for writing them?**

**A:** I studied actual swordplay techniques and consulted with experts in martial arts to ensure the accuracy of the fight scenes. I also tried to convey the emotions and adrenaline that fuel a warrior's performance.

**Q: The novel explores themes of love, loyalty, and betrayal. What did you hope to convey with these themes?**

**A:** I believe that these are timeless themes that resonate with readers of all backgrounds. Love and loyalty can be powerful motivators, but they can also lead to great pain when betrayed. I wanted to explore the complexities of these emotions and how they can shape our lives.

**Q: What do you hope readers will take away from "Sword Dancer, Tiger and Del"?**

**A:** I hope that readers will be entertained by the story and characters, but I also hope that they will reflect on the themes of the novel and discuss them with others. Ultimately, I want readers to find something that speaks to them and stays with them long after they finish the book.

### Question 1

A shaft is subjected to a bending moment of 200 N-m and a torque of 150 N-m. The shaft is made of steel with a yield strength of 400 MPa. What is the minimum diameter of the shaft?

### Answer

The minimum diameter of the shaft can be found using the following equation:

$$d = (16 * M_b * M_t) / (\pi * S_y)$$

where:

- $d$  is the shaft diameter in meters
- $M_b$  is the bending moment in Newton-meters
- $M_t$  is the torque in Newton-meters
- $S_y$  is the yield strength of the material in Pascals

Plugging in the given values, we get:

$$d = (16 * 200 \text{ N-m} * 150 \text{ N-m}) / (\pi * 400 \text{ MPa}) = 0.039 \text{ m} = 39 \text{ mm}$$

Therefore, the minimum diameter of the shaft is 39 mm.

### Question 2

A gear is made of steel with a Brinell hardness of 250. The gear has a diametral pitch of 10 teeth/inch and a face width of 1.5 inches. What is the maximum power that the gear can transmit?

### Answer

The maximum power that the gear can transmit can be found using the following equation:

$$P = (2 * \pi * n * M_t) / 60000$$

where:

- P is the power in kilowatts
- n is the speed in revolutions per minute
- M<sub>t</sub> is the torque in Newton-meters

The torque can be found using the following equation:

$$M_t = (F_t * d) / 2$$

where:

- F<sub>t</sub> is the tangential force in Newtons
- d is the pitch diameter in inches

The tangential force can be found using the following equation:

$$F_t = (W * P_d) / (2 * \pi * n)$$

where:

- W is the load in pounds
- P<sub>d</sub> is the diametral pitch in teeth/inch

Plugging in the given values, we get:

$$F_t = (250 \text{ lb} * 10 \text{ teeth/inch}) / (2 * \pi * 1000 \text{ rpm}) = 12.73 \text{ N}$$

$$M_t = (12.73 \text{ N} * 1.5 \text{ inches}) / 2 = 9.55 \text{ N-m}$$

$$P = (2 * \pi * 1000 \text{ rpm} * 9.55 \text{ N-m}) / 60000 = 1.01 \text{ kW}$$

Therefore, the maximum power that the gear can transmit is 1.01 kW.

## Conclusion

---

The solutions manual for Spotts' Design of Machine Elements is a valuable resource for students and practitioners alike. The manual provides step-by-step solutions to all of the problems in the textbook. This can be a great help for students who are struggling with a particular problem or for practitioners who need to check their work.
