Solutions Manual for Investments: Bodie, Kane, Marcus

Q: What is the time value of money (TVM)?

A: The TVM is the concept that states the value of money today is different from its value in the future due to the effects of interest. Interest has a time value because it represents the opportunity cost of holding onto money instead of investing it.

Q: How do you calculate the present value of a future cash flow?

A: The present value (PV) of a future cash flow is the amount of money that, if invested today at a given interest rate, would grow to equal the future cash flow at the end of the investment period. The formula for PV is: $PV = FV / (1 + r)^n$, where FV is the future value, r is the interest rate, and n is the number of periods.

Q: What is the relationship between risk and return?

A: Generally, there is a positive relationship between risk and return. This means that investments with higher expected returns tend to have higher risks, while investments with lower expected returns tend to have lower risks. However, there are exceptions to this general rule, such as during times of market volatility.

Q: How do you calculate the expected return on an investment portfolio?

A: The expected return on an investment portfolio is a weighted average of the expected returns on the individual assets in the portfolio. The weights are the proportions of the portfolio invested in each asset. The formula for the expected

return on a portfolio is: $E(r) = w_1 E(r_1) + w_2 E(r_2) + \dots + w_n E(r_n)$, where w_1, w_2, \dots, w_n are the weights and $E(r_1), E(r_2), \dots, E(r_n)$ are the expected returns on the individual assets.

Q: What is the role of asset allocation in investment management?

A: Asset allocation is the process of dividing an investment portfolio into different asset classes, such as stocks, bonds, and cash. The goal of asset allocation is to create a portfolio that meets the investor's specific financial goals and risk tolerance. Asset allocation is an important factor in determining the overall performance of an investment portfolio.
