Zoology Apiculture Unit I and Unit II: Bharathidasan University

Paragraph 1

Zoology Apiculture Unit I covers the fundamental concepts of beekeeping, including the biology and behavior of bees. Unit II explores the practical aspects of beekeeping, such as honey production, bee diseases, and pest management. The study of apiculture is crucial for understanding the importance of bees in pollination and biodiversity.

Paragraph 2

Question 1: Define apiculture and explain its significance.

Answer: Apiculture is the scientific management of honey bees for honey production and pollination services. It plays a vital role in agriculture, as bees are responsible for pollinating over 75% of food crops.

Paragraph 3

Question 2: Describe the different castes of honey bees and their functions.

Answer: There are three main castes of honey bees: the queen, workers, and drones. The queen is responsible for laying eggs, the workers for foraging and caring for the hive, and the drones for mating with the queen.

Paragraph 4

Question 3: Explain the process of honey production.

Answer: Honey production begins with nectar collection by worker bees. Nectar is stored in the hive and undergoes enzymatic conversion to form honey. The bees then seal the honeycombs with wax to prevent spoilage.

Paragraph 5

Question 4: Discuss common bee diseases and pest management strategies.

Answer: American foulbrood and European foulbrood are common bee diseases that can weaken or destroy hives. Pests such as wax moths and Varroa mites can also damage hives and reduce honey production. Integrated pest management approaches are used to control pests and minimize their impact on bees.
