Trig Identities Questions and Solutions

Trigonometric identities are equations involving trigonometric functions that are true for all values of the variables involved. They are used to simplify trigonometric expressions, prove identities, and solve trigonometric equations.

Question 1: Simplify the expression: $(\sin x + \cos x)^2$

Solution: Using the identity $(a + b)^2 = a^2 + 2ab + b^2$, we have:

$$(\sin x + \cos x)^2 = \sin^2 x + 2\sin x \cos x + \cos^2 x$$

Using the Pythagorean identity $\sin^2 x + \cos^2 x = 1$, we get:

$$(\sin x + \cos x)^2 = 1 + 2\sin x \cos x$$

Question 2: Prove the identity: $\sin 2x = 2\sin x \cos x$

Solution: Using the double angle formula for sine, we have:

$$\sin 2x = 2\sin x \cos x$$

Therefore, the identity is proven.

Question 3: Solve the equation: $2\cos^2 x - 3\cos x + 1 = 0$

Solution: Using the quadratic formula, we have:

$$\cos x = (3 \pm \sqrt{5}) / 4$$

Therefore, the solutions are:

$$x = \arccos((3 \pm \sqrt{5}) / 4)$$

Question 4: Find the value of $\sin 15^\circ$

Solution: Using the half angle formula for sine, we have:

$$\sin 15^\circ = \sqrt{(1 - \cos 30^\circ) / 2}$$

Using the special angle value $\cos 30^\circ = \sqrt{3} / 2$, we get:

$$\sin 15^\circ = \sqrt{(1 - \sqrt{3} / 2) / 2} = (1 - \sqrt{3}) / 4$$

Question 5: Simplify the expression: $\tan^2 x - 1$

Solution: Using the Pythagorean identity $\tan^2 x + 1 = \sec^2 x$, we have:

$$\tan^2 x - 1 = \sec^2 x - 1$$

Using the identity $\sec^2 x - 1 = \tan^2 x$, we get:

$$\tan^2 x - 1 = \tan^2 x$$

Therefore, the expression simplifies to:

$$\tan^2 x - 1 = 0$$

ISO TC 211 Geographic Information: Standards Guide

What is ISO TC 211 Geographic Information?

ISO TC 211 is an international technical committee that develops geographic information (GI) standards. These standards provide a common framework for the creation, exchange, and utilization of GI data to support various applications, such as urban planning, environmental management, and disaster response.

Why are GI Standards Important?

GI standards ensure the interoperability and quality of GI data, enabling effective collaboration and data sharing across different organizations and systems. They facilitate the exchange of data between different hardware and software platforms, as well as the representation of geographic features in a consistent manner.

What are the Key Standards Developed by ISO TC 211?

ISO TC 211 has developed a comprehensive suite of standards related to GI. These standards include:

- **ISO 19100:2015 Geographic Information - Reference Model**
- **ISO 19115:2014 Geographic Information - Metadata**
- **ISO 19118:2016 Geographic Information - Encoding**
- **ISO 19157:2013 Geographic Information - Data Quality**
