What is NSTI in medical terms? Necrotizing soft-tissue infections (NSTI) encompass a diverse disease process characterized by extensive, rapidly progressive soft tissue inflammation and necrosis. NSTIs are increasingly more common, and continue to be associated with a fulminant course and high mortality rates.

What is SSTI in medical terms? Skin and soft tissue infections (SSTI) are bacterial infections of the skin, muscles, and connective tissue such as ligaments and tendons.

What are the Big Five traits? The Big Five Personality Traits, also known as OCEAN or CANOE, are a psychological model that describes five broad dimensions of personality: Openness, Conscientiousness, Extraversion, Agreeableness, and Neuroticism. These traits are believed to be relatively stable throughout an individual's lifetime.

Can people change over time? Two seminal meta-analyses have shown that personality traits are relatively stable, but they also change, and they do so actually across the lifespan, meaning that there is no upper boundary. In fact, people aged 70 and older can still undergo pretty remarkable changes in their personality traits.

What is the difference between rank-order and mean level? It is important to distinguish between mean-level personality change, which evaluates how individuals develop over time on average, and rank-order change (i.e., change in the relative position of individuals on a trait over time) (Caspi et al., 2005b).

What are 3 key growth factors? Examples of protein growth factors are vascular endothelial growth factor (VEGF), epidermal growth factor (EGF), and platelet-derived growth factor (PDGF). Growth factor specificity to particular cell types is achievable by the expression of highly specific cell surface receptors.

What affects growth the most? It's thought that genetic factors account for about 80% of your final height. Certain environmental factors, such as nutrition and exercise, typically account for the remaining percentage. After age 2, most children grow at a steady rate of around 2.5 inches every year. Once puberty hits, you may grow even faster.
