### **Unit 2 Lesson 10 and 11: The Immune System Homework Answers**

---

**Question 1:** TURN TO 1. LEARN WHEELS IN COLOR PHONICS 25 READY TO GO MANIPULATIVE WHEELS THAT

Describe the three different types of immunity.

**Answer:**

- **Innate immunity:** Provides immediate, non-specific protection against pathogens through physical barriers, natural killer cells, and phagocytes.
- **Acquired immunity:** Specific, long-lasting protection developed through exposure to antigens and involving the production of antibodies and T cells.
- **Passive immunity:** Short-term protection acquired from antibodies or T cells obtained from another individual (e.g., through breast milk or vaccination).

**Question 2:**

Explain the role of antibodies in the immune response.

**Answer:**

Antibodies are proteins produced by B cells that recognize and bind to specific antigens on the surface of pathogens. They neutralize pathogens by preventing them from attaching to cells, activating complement, or opsonizing them for phagocytosis.

**Question 3:**

Describe the different types of T cells and their functions.

**Answer:**

- **Helper T cells (Th cells):** Recognize antigens presented by antigen-presenting cells (APCs) and activate B cells, cytotoxic T cells, and macrophages.
- **Cytotoxic T cells (Tc cells):** Kill infected cells by releasing cytotoxic granules and perforins that puncture the cell membrane.
- **Regulatory T cells (Treg cells):** Suppress immune responses and prevent excessive inflammation.

**Question 4:**

THAT

Explain the process of antigen presentation.

**Answer:**

Antigen presentation occurs when APCs (macrophages, dendritic cells) take in pathogens, break them down, and display fragments of their antigens on their cell surface, bound to MHC molecules. These MHC-antigen complexes are then recognized by T cells, which become activated.

**Question 5:**

Describe the role of cytokines in the immune response.

**Answer:**

Cytokines are signaling molecules released by immune cells that regulate the immune response. They activate and coordinate the actions of different immune cells, promote cell growth and differentiation, and regulate inflammation. For example, interleukin-2 (IL-2) activates T cells, while interferon-gamma (IFN- $\gamma$ ) activates macrophages and enhances cytotoxic T cell function.
