**What is the root cause of cancer?** Cancer is caused by certain changes to genes, the basic physical units of inheritance. Genes are arranged in long strands of tightly packed DNA called chromosomes. Cancer is a genetic disease—that is, it is caused by changes to genes that control the way our cells function, especially how they grow and divide.

**What are cancer causing germs called?** Known to cause cancer. *Helicobacter pylori* colonizes the human stomach and duodenum. It is described as a Class 1 carcinogen. In some cases it can cause stomach cancer and MALT lymphoma.

**What was cancer called before it was called cancer?** Hippocrates is credited with naming "cancer" as "karkinoma" (carcinoma) because a tumor looked like a "crab" ("karkinoma" is Greek for "crab") in that there is a central body to a tumor and the tumor extension appeared as the legs of the "crab".

**What are the causes of cancer?** A number of forces can cause gene mutations, such as smoking, radiation, viruses, cancer-causing chemicals (carcinogens), obesity, hormones, chronic inflammation and a lack of exercise.

**What is the biggest cause of cancer?**

**Why is cancer so common now?** Genetic clues The prominence of gastrointestinal cancers and the coincidence with dietary changes in many countries point to the rising rates of obesity and diets rich in processed foods as likely culprits in contributing to rising case rates.

**Which bacteria cause cancer?** H. pylori is the first bacterium to be termed a definite cause of cancer in humans by the International Agency for Research on Cancer. Mutagenic bacterial metabolites are also suspected to increase risk for cancer. This model is best exemplified in colon cancer.

**What virus turns into cancer?** HPV infection causes cells to undergo changes. If not treated these cells can, over time, become cancer cells. Once high-risk HPV infects cervical cells, it interferes with the ways in which these cells replicate, divide, and communicate with one another, causing infected cells to multiply in an uncontrolled manner.

**Is cancer a virus or a germ?** Cancer causes a body's cells to mutate, multiply, or grow abnormally. Cancer is not defined as a viral or bacterial infection. However, specific viral or bacterial infections can cause certain types of cancer.

**What stops cancer cells from growing?** Tyrosine kinase inhibitors Tyrosine kinases help to send growth signals in cells, so blocking them stops the cell growing and dividing. Cancer growth blockers can block one type of tyrosine kinase or more than one type. TKIs that block more than one type of tyrosine kinase are called multi TKIs.

**What is the deadliest cancer called?** Lung and bronchial cancer causes more deaths in the U.S. than any other type of cancer in both men and women.

**How does cancer begin?** DNA determines the structure, function and behaviour of a cell. or damage to it, a gene can mutate. Mutated genes don't work properly

because the instructions in their DNA get mixed up. This can cause cells that should be resting to divide and grow out of control, which can lead to cancer.

**What is the hardest cancer to cure?**

**Which cancer is not curable?**

**What type of cancer kills fastest?** If defining "fastest-killing" cancer is based on which cancer has the worst 5-year relative survival rate, then it would be a tie between pancreatic cancer and malignant mesothelioma (a relatively rare cancer in the U.S. with about 3,000 cases a year).

**What is 90% of cancer caused by?** 90 percent of cancer cases are caused by environmental factors. Therefore, a large proportion of them are preventable with good living habits and healthy environments, as remarked the director of the International Agency for Research in Cancer, from the World Health Organization (WHO), Christopher P.

However, over-consumption of sugar, particularly added sugars in processed beverages and foods, can contribute to obesity which is an important risk factor for cancer. There is no evidence that consuming sugar makes cancer cells grow faster or cause cancer.

**How does cancer begin?** DNA determines the structure, function and behaviour of a cell. or damage to it, a gene can mutate. Mutated genes don't work properly because the instructions in their DNA get mixed up. This can cause cells that should

be resting to divide and grow out of control, which can lead to cancer.

**What do most cancers occur from?** Current research suggests that environmental factors such as tobacco, diet, infection, alcohol, drugs, radiation and chemicals are more important than genetic (hereditary) factors in determining development of most cancers. All cancer is triggered by altered genes.

## **Schema di un Cannello Automatico: Domande e Risposte**

### **Paragrafo 1:**

#### **Che cos'è uno schema di un cancello automatico?**

Uno schema di un cancello automatico fornisce una rappresentazione grafica di tutti i componenti elettrici e meccanici coinvolti nel funzionamento del cancello. Include cablaggi, connessioni dei sensori, posizionamento degli attuatori e il layout complessivo del sistema.

### **Paragrafo 2:**

#### **A cosa serve uno schema?**

Gli schemi sono essenziali per la progettazione, l'installazione e la risoluzione dei problemi dei cancelli automatici. Facilitano la comprensione del funzionamento del sistema, l'identificazione dei componenti difettosi e la risoluzione di eventuali guasti.

### **Paragrafo 3:**

#### **Quali sono i simboli utilizzati negli schemi?**

Gli schemi dei cancelli automatici utilizzano simboli standard che rappresentano componenti come interruttori, relè, sensori e attuatori. Questi simboli sono governati da norme prestabilite per garantire la chiarezza e la coerenza.

### **Paragrafo 4:**

## Come si legge uno schema?

Per leggere uno schema di un cancello automatico, è necessario comprendere i simboli e seguire il flusso di corrente attraverso il sistema. Inizia identificando l'alimentazione e tracciando i suoi percorsi verso i vari componenti. Presta attenzione alle connessioni, ai cablaggi e alla posizione dei sensori e degli attuatori.

## Paragrafo 5:

### Quali sono le precauzioni da prendere quando si lavora con gli schemi?

È importante prestare attenzione alla sicurezza quando si lavora con gli schemi dei cancelli automatici. L'elettricità può essere pericolosa e lavorare su un gate live può comportare scosse o lesioni più gravi. Consulta sempre un elettricista qualificato per l'installazione e la manutenzione del tuo cancello automatico.
