**What is an object in JavaScript interview questions?** An object is a data structure that can store a collection of properties. Arrays are indexed by numbers. Objects are indexed by strings. Arrays can only store primitive data types and objects.

**What is the main objective of JavaScript?** JavaScript is a programming language used to create dynamic content for websites. It achieves this by adding new HTML elements while modifying existing ones. Many coders enhance web development skills using JavaScript to create user-friendly and interactive websites.

**What are the coding questions asked in an interview in JavaScript?**

**What is the difference between == and === in JavaScript interview questions?** The main difference between the two operators is how they compare values. The == operator compares the values of two variables after performing type conversion if necessary. On the other hand, the === operator compares the values of two variables without performing type conversion.

**What are the two types of objects in JavaScript?** There are two types of object properties: The data property and the accessor property.

**What is the main object in JavaScript?** JavaScript is designed on a simple object-based paradigm. An object is a collection of properties, and a property is an association between a name (or key) and a value. A property's value can be a function, in which case the property is known as a method.

**Is JavaScript backend or frontend?** Front-end devs use front-end programming languages like HTML, CSS, and JavaScript.

**Is JavaScript synchronous or asynchronous?** JavaScript is synchronous by default: every line of code is executed one after the other, and each task must wait for the previous one to be completed before moving to the next. In the above example, the first line of code, One , will be logged first, followed by the second line, Two , and the third line, Three .

**What is an object object in JavaScript?** When working with objects in JavaScript, you may have come across the [object, object] output. While this may seem irrelevant, it's not necessarily an error. [object, object] is the string representation of a JavaScript object data type.

**How to crack a JavaScript interview?**

**How to explain JavaScript in an interview?** JavaScript is a client-side scripting language and Java is object Oriented Programming language. Both of them are totally different from each other. JavaScript: It is a light-weighted programming language ("scripting language") for developing interactive web pages. It can insert dynamic text into the HTML elements.

**What are the four basic data structures in JavaScript?** In conclusion, a solid grasp of the four fundamental data structures in JavaScript—Arrays, Objects, Sets, and Maps—is essential for any developer. These structures provide the foundation for organizing and manipulating data in a variety of scenarios.

**How many data types are in JavaScript?** JavaScript data types are broadly categorized into primitive and non-primitive types. The primitive data types include Number, String, Boolean, Null, Undefined, and Symbol. Non-primitive types include Object, Array, and Function.

**What is != and !== in JavaScript?** The strict inequality ( !== ) operator checks whether its two operands are not equal, returning a Boolean result. Unlike the inequality operator, the strict inequality operator always considers operands of different types to be different.

**How to compare if 2 objects are equal JavaScript?** Two types of equalities in JavaScript Referential equality can be determined with equality operators such as strict equality (===) or coercive equality (==) and also by using Object.is() functions, but determining deep equality is tricky as the objects can be nested.

**What are the 3 dots in JavaScript object?** The three dots ... in JavaScript is known as the spread syntax, and it is commonly used to make shallow copies of JavaScript objects. It does this by taking in an iterable and expanding it into its individual elements.

**What is JSON in JavaScript?** JavaScript Object Notation (JSON) is a standard text-based format for representing structured data based on JavaScript object syntax. It is commonly used for transmitting data in web applications (e.g., sending some data from the server to the client, so it can be displayed on a web page, or vice versa).

**Can we add two objects in JavaScript?** We can also use the lodash library's merge() method to merge two objects in JavaScript. Explanation Here in this example, we are using lodash library's \_. merge() function to merge two objects, what it does is, it recursively merges properties of the source object into the target object.

**How do you define an object in JavaScript?**

**Which is considered as object in JavaScript?** Objects let you group related data together and split code into logical pieces. In JavaScript, we have primitive values and reference values. Number, Boolean, Null, Undefined, String, and Symbol are primitive values, while objects like DOM nodes, Arrays, and so on are reference values.

**What is an object in JavaScript function?** In JavaScript, functions are first-class objects, because they can be passed to other functions, returned from functions, and assigned to variables and properties. They can also have properties and methods just like any other object. What distinguishes them from other objects is that functions can be called.

**What is object object in JavaScript?** When working with objects in JavaScript, you may have come across the [object, object] output. While this may seem irrelevant, it's not necessarily an error. [object, object] is the string representation of a JavaScript object data type.
