**What is the rule of 7 direct reports?** In management circles, it is common knowledge that the ideal number of direct subordinates a manager should have is  $7 \pm 2$  (say it with me now: “seven plus or minus two!”) Some people prefer five direct subordinates, so that they can spend more time on individual contributor work.

Trust that your team has the skills to tackle challenges themselves. Don't forget to assign stretch projects that will help them grow.

### **How do you measure success as an engineering manager?**

**How many direct reports is too many for a manager?** We found that 5-7 reports was measurably optimal. Above 7, and we saw the Manager Effectiveness score fall off a cliff. Simple insight: you don't have the time to manifest the right behaviors (we studied and defined "the right" behaviors, too. Those are in my book) for each direct.

**What is the golden rule of reporting?** Keep your reporting simple while still being able to recognize a flashing red light that indicates a problem. The more frequently you look at a report, the less data it should contain.

**How many direct reports should a VP have?** Range of Span of Control – Number of Direct Reports by Level As we move further down in the Executive levels, this range tends to decrease for any of the Vice President-level positions. Having less than 4 or more than 10 direct reports for this group would suggest it may be appropriate to review the span of control.

**How many people should an engineering manager manage?** Managers should support six to eight engineers. This gives them enough time for active coaching, coordinating, and furthering their team's mission by writing strategies, leading change, and so on.

**What is the average number of direct reports for a manager?** The ideal mix falls in the middle of the range (5-10). This is the sweet spot for most managers. They have enough direct reports to be able to delegate work and provide support and guidance, but not so many that they are unable to do their job effectively.

**What is the ideal team size for an engineering manager?** Managers should support six to eight engineers. This gives them enough time for active coaching, coordinating, and furthering their team's mission by writing strategies, leading change, and so on.

**Should a manager make more than their reports?** It's reasonable for a manager to expect to earn more than those reporting to them, although how much more should depend on the manager's responsibilities and number of direct reports.
