The Best in VFR Airport Information: A Pilot's Guide

Navigating the vast airspace effectively requires pilots to access reliable and comprehensive airport information. The following guide answers some key questions to provide pilots with the best VFR airport resources available:

1. What is the most accurate source of VFR airport information?

The official Airport/Facility Directory (A/FD) published by the FAA serves as the most authoritative source. It contains detailed information on all U.S. public-use airports, including runway lengths, lighting, fuel availability, and other essential data.

2. How can I access the A/FD online?

The A/FD is available for free on the FAA's website at <https://www.faa.gov/airports/afd/>. Pilots can search for specific airports or browse the directory by state, city, or region.

3. What are other reputable sources of VFR airport information?

- **AirNav:** Provides detailed airport and airspace information, including runway diagrams, instrument approach procedures, and weather data.
- **ForeFlight:** A comprehensive mobile app that offers real-time airport information, including weather, NOTAMs, and fuel prices.
- **Garmin Pilot:** Similar to ForeFlight, Garmin Pilot provides access to airport data, flight planning tools, and moving maps.

4. What information should I prioritize when reviewing VFR airport information?

- Runway dimensions and surface type
- Airport lighting and availability
- Fuel quality and availability
- Communication frequencies
- Any special procedures or restrictions

5. How can I ensure my airport information is current?

Checking the NOTAMs (Notice to Air Missions) for the intended airport and surrounding airspace is crucial. NOTAMs provide timely information on airport closures, runway construction, or any other changes that may affect VFR operations.
