or Sedecordle. Each of these word games resembles Wordle, but they add more rows, columns and words to solve.

What is the introduction of plant disease? Plant disease is defined as the state of local or systemic abnormal physiological functioning of a plant, resulting from the continuous, prolonged 'irritation' caused by phytopathogenic organisms (infectious or biotic disease agents).

Why do plants get sick? Nutrient deficiencies, excess heat, herbicide damage, flooding, and drought can also impair plant growth and cause similar symptoms to those caused by pathogens.

What are the main causes of plant diseases? Infectious plant diseases are mainly caused by pathogenic organisms such as fungi, bacteria, viruses, protozoa, as well as insects and parasitic plants [1].

How are diseases spread from plant to plant? Transmission and infection Most foliage invaders are spread from plant to plant by windblown rain or dust. Humans disseminate bacteria through cultivation, grafting, pruning, and transporting diseased plant material. Animals, including insects and mites, are other common transmission agents.

What is the most common disease in plants?

What are the three basic symptoms of plant disease? We often recognize these problems based on the symptoms that result. A symptom is a change in plant growth or appearance that may indicate or describe a plant health problem. Examples of symptoms include yellowing, wilting, dieback, galls or blight.

Do plants have feelings? Research has shown that plants are complex organisms that can feel, communicate, and respond to their environment. Plants can feel emotions too. This might sound surprising, but it is true.

Can sick plants recover? Also, once a plant's leaves become dry, shriveled, or mottled, they won't ever go back to being healthy green leaves. The only way forward is to encourage new growth.

Can plants feel pain? Plants do not feel pain because they don't have a brain for any signals to be sent to. Imagine if a human didn't have a brain; they could get cut, but they wouldn't know and there wouldn't be anything to tell that they are in pain...so technically they would not be in pain. Same for plants.

What is the most responsible factor for plant diseases? Fungi and Fungal-like Organisms (FLOs) Collectively, fungi and FLOs cause the most plant disease than any other group of plant pathogens. These organisms cannot make their own food, lack chlorophyll, have filamentous growth, and may or may not reproduce by spores.

How to cure plant disease?

Can humans get diseases from plants? Human infection from plants is very rare, but it does happen. The primary pathogen of concern is a bacteria known as *Pseudomonas aeruginosa*, which causes a type of soft rot in plants. *P. aeruginosa* infections in humans can invade nearly any tissue in the human body, provided they are already weakened.

Do plants recover from disease? Virus-induced diseases cause severe damages to cultivated plants resulting in crop losses. Interestingly, in some cases, the diseased plants are able to re-gain health, further grow and develop normally.

How can we control plant diseases? A variety of chemicals are available that have been designed to control plant diseases by inhibiting the growth of or by killing the disease-causing pathogens. Chemicals used to control bacteria (bactericides), fungi (fungicides), and nematodes (nematicides) may be applied to seeds, foliage, flowers, fruit, or soil.

How to get rid of plant viruses? Unfortunately, there are no chemical controls for plant virus diseases. Dig up and dispose of affected plants – to prevent it from spreading to other plants.

What kills plant diseases? Bonide Copper Fungicide Controls powdery mildew, downy mildew, black spot, peach leaf curl, rust, and other listed diseases. Perfect for use on vegetables, roses, fruits, nuts, herbs, ornamentals, and turf. Incredibly easy to apply and can be used up to the day of harvest.

What to give a sick plant? Sometimes an easy remedy to restore plant health is adding more water or moving to a sunnier spot. If that doesn't work and you've tried many options, it could be a sign of a larger problem. Your plant could have a disease.

How to identify sick plants? There are a variety of symptoms of plant disease such as spots, dead or dying tissue, fuzzy spores, bumps, bulges, and irregular coloration on the fruits. The disease triangle consists of a susceptible plant, a pathogen, and favorable environmental conditions that allow the pathogen to infect the plant.

How to tell if your plant has a disease?

What does fungus look like on plants? The most common tell-tale sign of a fungal infection is the appearance of Mycelia – patches of clusters of hyphae which take the form of spots, powder, rust, down and cotton wool-like effusions on flowers, stems, leaves and fruit.

How do you diagnose plant diseases? Start by examining affected parts with a dissecting scope and move to a compound light microscope, if necessary. Look for fruiting structures (signs of the disease agent) or evidence of insects or insect activity. Leaves/Stems: IF leaf spots, lesions or cankers, look for fungal growth.

What is the introduction of plant viral disease? plant virus, any of a number of agents that can cause plant disease. Plant viruses are of considerable economic importance because many of them infect crop and ornamental plants. Numerous plant viruses are rodlike and can be extracted readily from plant tissue and crystallized.

What is the study of plant disease called? Plant pathology is a science that studies plant diseases and attempts to improve the chances for survival of plants when they are faced with unfavorable environmental conditions and parasitic microorganisms that cause disease.

What is the definition of disease? disease, any harmful deviation from the normal structural or functional state of an organism, generally associated with certain signs and symptoms and differing in nature from physical injury. A diseased organism commonly exhibits signs or symptoms indicative of its abnormal state.

How do you identify plant disease? There are a variety of symptoms of plant disease such as spots, dead or dying tissue, fuzzy spores, bumps, bulges, and irregular coloration on the fruits. The disease triangle consists of a susceptible plant, a pathogen, and favorable environmental conditions that allow the pathogen to infect the plant.

Solutions of Computer Fundamentals by P.K. Sinha and P.I.

Page ID10: Question and Answers

Paragraph 1:

- **Question:** Define a computer.
- **Answer:** A computer is an electronic device capable of performing a series of arithmetic or logical operations automatically and sequentially under the control of a stored program.
- **Question:** Name the five basic functions of a computer.
- **Answer:** Input, output, processing, storage, and control

Paragraph 2:

- **Question:** Explain the difference between hardware and software.
- **Answer:** Hardware refers to the physical components of a computer, while software consists of the instructions that tell the computer what to do.
- **Question:** What is the role of an operating system?

- **Answer:** An operating system controls the computer's hardware and provides basic services to application programs.

Paragraph 3:

- **Question:** Describe the different types of computer viruses.
- **Answer:** Computer viruses can be classified into three main types: boot sector viruses, file viruses, and macro viruses.
- **Question:** Explain how a firewall protects a computer.
- **Answer:** A firewall monitors incoming and outgoing network traffic and blocks unauthorized access to the computer.

Paragraph 4:

- **Question:** What is the difference between a web browser and a search engine?
- **Answer:** A web browser allows users to access and view websites, while a search engine helps users find specific information on the internet.
- **Question:** Describe the benefits of using cloud computing.
- **Answer:** Cloud computing offers scalability, cost savings, reduced IT infrastructure, and improved security.

Paragraph 5:

- **Question:** What is the importance of data encryption?
- **Answer:** Data encryption protects sensitive information from unauthorized access by converting it into an unreadable format.
- **Question:** Explain the different types of database management systems.
- **Answer:** Database management systems can be classified into three categories: hierarchical, network, and relational databases.
