Is ML Aggarwal enough for JEE mains? Yeah! APC Understanding ISC Mathematics of class-XI by ML Aggarwal is a good book for foundation of the class-XI JEE maths courses. It can help to build the concepts of the topics and clarification of the problems. The book contains very good illustrative examples as well as

exercises.

Which is the best channel for JEE?

Section 12.2 Chromosomes and DNA Replication

Question 1: What is the structure of a chromosome? Answer: Chromosomes consist of long, thin strands of DNA tightly coiled around proteins called histones. These DNA-histone complexes form structures called chromatin, which are further organized into chromosomes visible during cell division.

Question 2: What is the role of DNA in chromosomes? Answer: DNA is the genetic material that carries instructions for the development and function of an organism. Each chromosome contains a single, continuous molecule of DNA. DNA molecules are double-stranded, consisting of two complementary strands held together by hydrogen bonds.

Question 3: Describe the process of DNA replication. Answer: DNA replication occurs during cell division and involves the unwinding and separation of the two DNA strands. Each strand serves as a template for the synthesis of a new complementary strand, resulting in the production of two identical daughter DNA molecules. The replication process is highly accurate and essential for the faithful transmission of genetic information.

Question 4: What is the significance of DNA replication? Answer: DNA replication is crucial for cell division and the growth and development of organisms. It ensures that each new cell receives a complete and accurate copy of the genetic material, allowing for the continuation of life and genetic continuity between generations.

Question 5: How is DNA replication regulated? Answer: DNA replication is tightly regulated to ensure that it occurs at the appropriate time and only once per cell cycle. Specific proteins and signaling pathways monitor the replication process, preventing errors and maintaining the integrity of the genetic material.

The Stress of Life: Selye's 1976 Model

Q: What is stress? A: Stress is a physiological response to a perceived threat or demand. It is the body's way of preparing to fight or flee. When we experience stress, our bodies release hormones such as cortisol and adrenaline, which increase our heart rate, breathing, and muscle tension.

Q: What are the stressors in our lives? A: Stressors can be anything that challenges us or makes us feel threatened. Common stressors include work, relationships, finances, health, and major life events such as moving or losing a job.

Q: What are the stages of stress? A: According to Hans Selye's 1976 model, stress occurs in three stages:

- **Alarm reaction:** This is the initial response to stress, where the body releases hormones to prepare for fight or flight.
- **Resistance:** If the stressor continues, the body will enter a stage of resistance, where it tries to adapt to the stress and maintain balance.
- **Exhaustion:** If the stressor continues for an extended period, the body will eventually run out of resources and enter a stage of exhaustion, which can lead to physical and mental health problems.

Q: How can we manage stress? A: There are many different ways to manage stress. Some helpful strategies include:

- Exercise
- Relaxation techniques (such as yoga, meditation, or deep breathing)
- Healthy diet
- Sufficient sleep
- Social support

Q: When should I seek professional help for stress? A: If you are experiencing persistent stress that is affecting your physical or mental health, it is important to seek professional help. A therapist can help you identify the sources of your stress and develop coping mechanisms.
