Q: What is Spring AOP? **A:** Spring Aspect-Oriented Programming (AOP) is a framework that allows you to add additional functionality to your application without modifying the existing code. It uses interceptors and advice to modify method calls and add cross-cutting concerns, such as logging, security, and transaction management.

Q: What are the benefits of using Spring AOP? **A:** Spring AOP offers several benefits, including:

- **Decoupling of concerns:** AOP allows you to separate cross-cutting concerns from your business logic, making your code more modular and easier to maintain.

- **Reusability:** Advice can be reused across multiple classes, reducing code duplication.
- **Extensibility:** Spring AOP provides a framework for implementing custom aspects, allowing you to extend the functionality of your applications.

Q: How do you use Spring AOP? A: To use Spring AOP, you need to define aspects and apply them to the target classes. Aspects contain advice that specifies what actions should be taken before or after method calls. You can apply aspects using annotations, XML configuration, or Java code.

Q: What are some common use cases for Spring AOP? A: Spring AOP can be used in a variety of situations, including:

- **Logging:** You can use aspects to log method calls and other events.
- **Security:** Aspects can be used to enforce access control and authorization.
