Line spectra of atoms: In the 19th century, physicists observed that when a sample of a single element (e.g. sodium) was heated it emitted light, but only with a number of characteristic wavelengths, forming what is called a line spectrum. Classical physics was unable to explain this phenomenon.

What is the formula for classical mechanics? $F=ma$ For every force, there is an equal and opposite force. $\frac{dp}{dt} = F$ If there is no external force, momentum is conserved. An elastic collision is one which conserves total kinetic energy. In an inelastic collision kinetic energy is lost (converted to heat etc).

Why can't classical physics explain black body radiation? Answer and Explanation: Classical theory failed to explain black body radiation as it had no notion of particle nature of light. A black body is known as an ideal body which absorbs all radiations incident upon it. This absorption of radiation is regardless of the frequency of the radiations.

What is the fundamental law of classical mechanics? The two basic principles of classical mechanics are these: 1) Balance of forces: The total force acting on a physical system and each of its parts is zero. 2) Balance of torques: The total torque acting on a physical system and each of its parts is zero.”
