The communication media is also called transmission media. Figure 11.2 shows the role of these five components in data communication.

What is data communication in computer network? Data communication is the process of transferring data from one place to another or between two locations. It allows electronic and digital data to move between two networks, no matter where the two are located geographically, what the data contains, or what format they are in.

What is network layer in data communication and networking? Network-to-network connections are what make the Internet possible. The "network layer" is the part of the Internet communications process where these connections occur, by sending packets of data back and forth between different networks.

What are the fundamentals of data communication? The effectiveness of a data communications system depends on four fundamental characteristics: delivery, accuracy, timeliness and jitter. Delivery: The system must deliver data to the correct destination. Data must be received by the intended device or user.

What are the 3 basic elements of a network? Basic elements of a computer network include hardware, software, and protocols. The interrelationship of these

basic elements constitutes the infrastructure of the network.

What is the most important element of data communication? The essential components of data communication are: Message: Information (data) to be communicated (e.g., text, numbers, pictures, video) Sender: The device that sends the data message (e.g., computer, video camera) Receiver: The device that receives the message (e.g., a computer, workstation, television)

What is the difference between network and networking? So, in short, "network" is the physical or virtual infrastructure of interconnected devices, while "networking" refers to the activities and processes related to creating, configuring, and maintaining these networks.

What is the difference between a WLAN and a LAN? LAN connections include both wired and wireless connections. WLAN connections are completely wireless. LAN network is a collection of computers or other such network devices in a particular location that are connected together by communication elements or network elements.

What is a protocol in data communication? protocol, in computer science, a set of rules or procedures for transmitting data between electronic devices, such as computers. In order for computers to exchange information, there must be a preexisting agreement as to how the information will be structured and how each side will send and receive it.

What is the main purpose of data communication? The fundamental purpose of data communications is to exchange information between user's computers, terminals and applications programs. ! In its simplest form data communications takes place between two devices that are directly connected by some form of point-to-point transmission medium.

What is a message in a computer network? (1) (noun) Any data transmitted over a network that is intended for human interpretation. Just as a program becomes a "job" or "process" when it runs in the computer, data becomes a "message" when it

is transmitted from one person to another. Email, text and chat are examples.
