## **The Missile Technology Control Regime and UAVs: A Mismatch**

The Missile Technology Control Regime (MTCR) is an international non-proliferation agreement designed to control the transfer of missile technology to prevent its use in weapons of mass destruction programs. However, the MTCR has drawn criticism for its applicability to unmanned aerial vehicles (UAVs), also known as drones.

### **1. What is the MTCR?**

The MTCR was established in 1987 by the United States, its NATO allies, and Japan. It aims to restrict the proliferation of missiles capable of delivering nuclear, chemical, or biological weapons. The MTCR has 35 member states and is governed by guidelines that cover the export of missiles, launchers, and associated equipment.

### **2. Why is the MTCR Controversial?**

The MTCR has been criticized for its inclusion of provisions that limit the development and export of UAVs. These provisions were added as part of an attempt to address concerns about the potential for UAVs to be used as delivery platforms for weapons of mass destruction. However, critics argue that these provisions are outdated and unrealistic.

### **3. Are UAVs a Threat to Non-Proliferation?**

UAVs are primarily used for surveillance and non-lethal operations. While some UAVs can be armed, they are typically not capable of delivering weapons of mass destruction. Critics of the MTCR argue that the inclusion of UAVs in the regime is an overly broad and unnecessary measure.

### **4. What are the Consequences of Including UAVs in the MTCR?**

The inclusion of UAVs in the MTCR has created a mismatch between the regime's objectives and the realities of UAV technology. It has stifled innovation and collaboration in the UAV industry, particularly among countries that are not members of the MTCR. This mismatch has also made it difficult for countries to develop UAVs

for legitimate purposes, such as disaster relief and environmental monitoring.

## **5. What Can Be Done to Address the Mismatch?**

To address the mismatch between the MTCR and UAVs, the following steps could be taken:

- Revise the MTCR to remove provisions that restrict UAV development and export.
- Establish clear criteria for determining which UAVs are subject to MTCR controls.
- Encourage international cooperation and information sharing on UAV technologies.
- Promote the responsible use of UAVs for non-proliferation purposes.
