The Dwarf: A Tale of Identity and Existential Angst by Pär Lagerkvist

Who is the Dwarf? In Pär Lagerkvist's novella "The Dwarf," the protagonist is an unnamed dwarf who lives in the court of a powerful duke. Despite his small stature and grotesque appearance, the dwarf possesses a keen intellect and a fiercely independent spirit.

What is the Dwarf's Dilemma? Tormented by a sense of inadequacy, the dwarf constantly seeks to prove his worth to those around him. He engages in malicious pranks and schemes to attain power, but his efforts only serve to further alienate him.

How Does the Dwarf Cope with Rejection? As the dwarf's loneliness and frustration intensify, he develops a perverse fascination with the idea of being evil. He revels in his ability to hurt others, believing it to be the only way to exert control over his own existence.

Why is "The Dwarf" Considered a Classic? Lagerkvist's novella explores profound themes of identity, existential angst, and the human condition. Its haunting and evocative prose has earned it a place among the greatest works of 20th-century literature. The dwarf's struggle to find meaning in a world that rejects him continues to resonate with readers today.

Unlock Academic Success with ZIMSEC O Level Maths Past Exam Papers

Past exam papers are an invaluable resource for students preparing for their ZIMSEC O Level Mathematics examination. They provide insights into the exam format, question types, and difficulty level. By reviewing past papers, students can identify areas where they need improvement and develop effective study strategies.

Question 1: A rectangular field measures 100 meters by 60 meters. If the area is increased by 20%, find the new dimensions of the field.

Answer: Let the new dimensions be l meters by b meters. Then, $lb = 120\%$ of $100 \times 60 = 7200$. Solving for l gives $l = 7200/b$. Substituting b with 60 gives $l = 7200/60 = 120$ meters. Therefore, the new dimensions are 120 meters by 60 meters.

Question 2: A train travels from city A to city B at a speed of 120 km/h. On the return journey, it travels at a speed of 100 km/h. Find the average speed for the round trip.

Answer: Average speed = total distance / total time
Total distance = $2 \times$ distance from city A to city B
Let the distance be d kilometers.
Total time = $d/120 + d/100 = 11d/600$ hours
Therefore, average speed = $(2d) / (11d/600) = 1200/11 =$

approximately 109.1 km/h.

Question 3: Solve for x: $2x^2 - 5x + 3 = 0$

Answer: Using the quadratic formula: $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$, where $a = 2$, $b = -5$, and $c = 3$ $x = \frac{5 \pm \sqrt{25 - 4 \times 2 \times 3}}{2 \times 2}$ $x = \frac{5 \pm \sqrt{5}}{4}$ Therefore, $x = \frac{5 + \sqrt{5}}{4}$ or $x = \frac{5 - \sqrt{5}}{4}$.

Question 4: Find the volume of a sphere with a radius of 10 centimeters.

Answer: Volume of a sphere = $\frac{4}{3}\pi r^3$ $r = 10$ centimeters Volume = $\frac{4}{3} \times \pi \times 10^3 = \frac{4000\pi}{3} \approx$ approximately 4188.8 cubic centimeters.

Question 5: A circle has a circumference of 25 centimeters. Find its diameter and radius.

Answer: Circumference of a circle = $2\pi r$ Diameter = Circumference / π Diameter = 25 centimeters / $\pi = 25$ centimeters Radius = Diameter / 2 = 25 centimeters / 2 = 12.5 centimeters.
