The Making of Urban Japan: Cities and Planning from Edo to the Twenty-First Century

This book by Nissan Institute and Routledge Japanese Studies delves into the evolution of Japan's urban landscape from the Edo period to the present day. It offers a comprehensive exploration of the planning and development strategies that have shaped Japan's cities into the thriving metropolises they are today.

Q: What were the key features of Japanese cities during the Edo period (1603-1868)? **A:** Cities such as Edo (present-day Tokyo) and Osaka were characterized by their castle towns, merchant quarters, and elaborate street networks. Merchants played a significant role in urban development, creating bustling commercial districts with specialized streets for different trades.

Q: How did Western influences impact Japanese urban planning in the late 19th century? **A:** After the Meiji Restoration in 1868, Japan embraced Westernization and adopted urban planning principles from Europe and the United States. This led to the creation of planned cities like Kobe and Yokohama, featuring wide boulevards, public parks, and modern infrastructure.

Q: What were the challenges faced by Japanese cities during the 20th century? **A:** Rapid urbanization and industrialization during the early 20th century led to overcrowding, pollution, and social problems. Planners sought to address these issues through zoning regulations, green spaces, and public housing projects.

Q: How did Japan's cities respond to the post-war economic boom? **A:** The economic miracle of the 1960s and 1970s fueled the expansion of Japanese cities. Planners focused on creating high-rise buildings, expressways, and extensive transportation systems. Urban policies also prioritized environmental conservation and the preservation of historical heritage.

Q: What are the contemporary trends in Japanese urban planning? **A:** Modern Japanese cities are becoming more compact, sustainable, and resilient. Planners emphasize mixed-use development, green infrastructure, and accessible public transportation. The goal is to create vibrant, livable cities that meet the needs of a rapidly aging population while adapting to climate change.
