**What is relation and function in elective maths?** Difference Between Relation and Function A relation in math is a set of ordered pairs defining the relation between two sets. A function is a relation in math such that each element of the domain is related to a single element in the codomain. A relation may or may not be a function.

**Who is the father of elective mathematics?** Father of Mathematics – Archimedes The Greek mathematician Archimedes is known as the father of mathematics because of his contributions to the subjects and its concepts. One of his important contributions is also in physics, he developed a principle named “Archimedes Principle”.

**What is the meaning of elective math?** Elective mathematics deals with reasoning by analogies, making judgments through discrimination of values, analysis of data, and communication of one's thoughts through symbolic expression and graphs. Elective Mathematics at the Senior High School level builds on the Core Mathematics of Senior High School.

**What is an example of relation and function in math?** There are relations where multiple inputs can have the same output. This is a still function, since each input produces one output even though the outputs are the same. For example, in the relation  $f(x) = \{ (0,3), (1,3), (2,3), (4,3) \}$ , each input produces one output. All of the outputs are the same.

**What is a relation in math Grade 7?** A relation is a relationship between sets of values. In math, the relation is between the x-values and y-values of ordered pairs. The set of all x-values is called the domain, and the set of all y-values is called the range.

**Who is the papa of mathematics?** Archimedes is widely regarded as one of the greatest mathematicians in history, earning him the title of the "Father of Mathematics." Born in Syracuse, Sicily, in 287 BC, Archimedes was a polymath who made significant contributions to a wide range of fields, including mathematics, physics, engineering, and astronomy.

**Who found zero?** Aryabhata, a great astronomer of the classic age of India was the one who invented the digit "0" (zero) for which he became immortal but later on is given to Brahmagupta who lived around a century later 22, another ancient Indian mathematician.

**Who invented algebra?** Muhammad ibn Musa al-Khwarizmi was a 9th-century Muslim mathematician and astronomer. He is known as the "father of algebra", a word derived from the title of his book, Kitab al-Jabr.

**What is the difference between a relation and a function in math?** All functions are relations, but not all relations are functions. The difference between a relation and a function is that a relationship can have many outputs for a single input, but a function has a single input for a single output. This is the basic factor to differentiate between relation and function.

**What is functional relationship in math?** A function exists when each x-value (input, independent variable) is paired with exactly one y-value (output, dependent variable). This pairing is also referred to as a functional relationship.

**What is a set relation and function in math?** Sets, relations and functions all three are interlinked topics. Sets denote the collection of ordered elements whereas relations and functions define the operations performed on sets. The relations define the connection between the two given sets.

**What is relation and function class 11?** In Maths, the term relation is used to relate the numbers, symbols, variables, sets, group of sets, etc. For example, A is a subset of B denotes the relation of A and B. A function is a kind of relation which is operated between two quantities to yield output.
