Stored Procedures: A Comprehensive Guide**

What are Stored Procedures in PL/SQL?

In PL/SQL (Procedural Language/Structured Query Language), stored procedures are precompiled SQL statements stored in the database. They encapsulate a set of SQL statements or PL/SQL code that can be executed multiple times with different parameters.

What is a Stored Procedure in SQL?

A stored procedure in SQL is a named set of SQL statements or Transact-SQL (T-SQL) statements that perform a specific task. They are stored in the database and can be executed repeatedly with different input parameters.

Where are SQL Stored Procedures Stored?

SQL stored procedures are stored in the database system catalog, typically under a schema or database. They can be accessed and executed by authorized users.

What Command is Used to Create a PL/SQL Stored Procedure?

The CREATE PROCEDURE command is used to create a PL/SQL stored procedure. It includes the procedure name, parameters, and the body of the procedure.

What is Function and Procedure in PL SQL?

- **Function:** A function in PL/SQL returns a single value based on its input parameters.
- **Procedure:** A procedure does not return a value. It performs a series of actions or modifies data within the database.

How to See Stored Procedure in SQL?

To view stored procedures in SQL, use commands like:

- **Oracle:** `SELECT * FROM USER_PROCEEDURES;`
- **SQL Server:** `SELECT * FROM sys.procedures;`

Why are SQL Stored Procedures Used?

SQL stored procedures offer several benefits:

- **Code Reusability:** They allow you to group SQL statements into reusable modules.
- **Performance Enhancement:** They can improve performance by minimizing network round trips and reducing parsing overhead.
- **Data Security:** They enforce business rules and authorization at the database level.
- **Simplification:** They simplify complex queries and make them easier to understand and maintain.

What is Called Stored Procedure?

A stored procedure is also known as a **database procedure** or **precompiled SQL**.

How to Run a Stored Procedure in Oracle?

To run a stored procedure in Oracle, use the `EXECUTE` command with the procedure name and parameters.

How Many Types of Stored Procedure are There in SQL?

SQL stored procedures can be classified into two types:

- **Scalar Stored Procedures:** Return a single value.
- **Table-valued Stored Procedures:** Return a set of rows as a result.

What are Stored Procedures in SAP?

In SAP, stored procedures are called **ABAP/4 procedures**. They are stored in the ABAP/4 repository and can be accessed from ABAP programs.

What is the Difference Between a Function and a Procedure?

The key difference between a function and a procedure is that a function returns a value while a procedure does not.
