### **Zumdahl Chemistry 8th Edition: Questions and Answers**

**Question 1: What is the ideal gas law equation? Answer:**  $PV = nRT$ , where P is pressure, V is volume, n is the number of moles, R is the ideal gas constant, and T is temperature.

**Question 2: Explain the concept of electronegativity. Answer:** Electronegativity is the ability of an atom to attract electrons in a chemical bond. The greater the electronegativity of an atom, the more strongly it attracts electrons and the more polar the bond it forms.

**Question 3: Describe the role of activation energy in chemical reactions. Answer:** Activation energy is the minimum amount of energy required for a chemical reaction to occur. It represents the energy barrier that must be overcome for the reactants to reach the transition state, where the bonds break and new bonds form.

**Question 4: What is the equilibrium constant in a chemical reaction? Answer:** The equilibrium constant (K) is a number that describes the extent to which a chemical reaction proceeds. It is the ratio of the concentrations of the products to the concentrations of the reactants at equilibrium, when the forward and reverse reactions occur at the same rate.

**Question 5: Explain the principles of thermodynamics and their application to chemical reactions. Answer:** Thermodynamics is the study of energy and its transformations. The first law of thermodynamics states that energy cannot be created or destroyed, while the second law states that entropy, or disorder, always increases in a closed system. These principles can be used to predict the spontaneity and equilibrium of chemical reactions.
