The Prisoner Society: Power, Adaptation, and Social Life in an English Prison

Clarendon Studies in Criminology

Summary

This seminal work by researcher C.H. Rolph provides a detailed account of the social structure and dynamics within a maximum-security prison in England. Rolph's study focuses on the ways in which prisoners navigate the complexities of confinement, adapt to the prison environment, and establish their own social order.

Questions and Answers

1. What is the central thesis of Rolph's research?

Rolph argues that prisons are microcosms of society, with their own unique hierarchies, informal rules, and power dynamics. Prisoners adapt to these structures through a process of "secondary adjustment," where they conform to the demands of prison life while maintaining their autonomy and sense of self.

2. How is power distributed within the prison?

Power is primarily held by prison staff, who control the physical and social aspects of the prison environment. However, prisoners also negotiate and exert their own power within the confines of the institution. They form alliances, manipulate the system to their advantage, and create their own "shadow" economy based on contraband and favors.

3. How do prisoners cope with the challenges of confinement?

Prisoners develop various coping mechanisms to deal with the stress, boredom, and isolation of prison life. These mechanisms include:

- Joining groups or "rings" for support
- Seeking out leadership roles or informal status
- Engaging in illicit activities, such as gambling or drug use
- Escaping into fantasy or religion

4. What is the impact of prison on social life?

Prison disrupts traditional social relationships and norms. Prisoners lose contact with family and friends, and their relationships within the prison are often transient and based on situational factors. This leads to a sense of isolation and an erosion of social bonds.

5. What implications does Rolph's research have for prison reform?

Rolph's study highlights the need for a more humane and rehabilitative approach to imprisonment. He suggests that prisons should focus on providing prisoners with opportunities for growth, education, and the development of positive social skills. By addressing the underlying social and psychological factors that contribute to crime, prisons can reduce recidivism and promote successful reintegration into society.
