Why is E85 more powerful? Faster Burning. E85 fuel has a faster ignition time and flame propagation when compared to gasoline. This leads to higher cylinder pressure, as well as increased engine torque and power, gaining up to 20%. The increased exhaust gas flow allows turbos to spool quicker.

Is E85 good or bad? As mentioned earlier, E85 provides better fuel efficiency and reduces carbon buildup in engines, resulting in fewer costly repairs down the line. Additionally, many car owners report that their vehicles run smoother and quieter when using E85 compared to regular gasoline.

What year BMW Z4 to stay away from? We recommend staying away from the 2003, 2005, 2006, 2007, 2008, and 2016 models. Most of the issues that come with these models come from areas such as the steering and technical malfunctions, like the roof. Values that are currently toward the bottom of the depreciation curve won't hurt, either.

Why do people use E85 for racing? E85's cooling effect equals lower inlet temperatures, this added with its greater knock resistance allows racers to creep up boost levels higher than traditional gasoline blends.
