**What oil is recommended for Massey Ferguson tractor?** AGCO PARTS ENGINE OIL 15W-40 is suitable for most heavy-duty diesel engines, non-turbocharged and turbocharged alike, for on and off highway vehicles common in agriculture. For a full

listing of equipment approvals and recommendations, please consult your local representative.

**How do I know what year my Massey Ferguson tractor is?** To identify your tractor model and year of manufacture check the engine serial number (SN) plates. The SN plate is located at varying positions on the instrument console, depending on the model.

**How often does a diesel need to regen?** Depending on your driving, active regeneration may happen as often as once a day. If you do a lot of stop and go, it can happen even more often. Frequency depends on duty cycle and how much soot collects – as often as once a day or every other day. An active regeneration could take up to one-half hour or more.

**How often should a tractor regen?** When it's time for ReGen to occur, the tractor will automatically inform the operator to perform the ReGen function on the engine. Once the first 50-hour ReGen has been completed, YT Series tractors don't require a timed ReGen again until after the next 100 hours.

**What company bought out Massey Ferguson?** In 1997, Massey Ferguson was acquired by AGCO Corporation, a publicly-traded farm equipment manufacturer with sales of over \$9 billion. AGCO is headquartered in Duluth, Georgia, and it has operations around the world. AGCO products are sold through five core brands: Fendt, Challenger, GSI, Massey Ferguson and Valtra.

**How often do you change oil in a Massey Ferguson tractor?** Every 100 hours: Service the engine. Every 200 hours: Change the engine oil and replace the oil filter,

check the steering linkage and front wheel alignment, and inspect the tractor for any damage. Check belts and hoses, hydraulic lines, and replace the air filter.

**Is synthetic oil OK for tractors?** It is available in the same viscosity and weight classifications you have always used; for example, 30W, 15W40, and 20W50. CK-4 is also available in different types of oil – conventional, full synthetic, and synthetic blend. So you'll use the same kind of oil you have always used, it's just better quality oil.

**Who makes Massey-Ferguson tractor engines?**

**Where are Massey-Ferguson tractors made today?** Beauvais, France. Welcome to Beauvais, the Global Home of Massey Ferguson and center of Engineering & Manufacturing excellence. Over 1,000 000 tractors have been built here and nearly 80% of production is exported to over 70 different countries world-wide.

**Did Ford make Massey-Ferguson tractors?** In 1938 Ferguson made a handshake agreement with Henry Ford to produce Ferguson System Ford-Ferguson tractors using Ferguson's own self-regulating three-point hitch system, beginning with the Ford-Ferguson 9N tractor.

**Is it OK to interrupt a regen?** If you don't drive for another 15 minutes or so, the regeneration is interrupted and that is not good. When this happens several times, the soot builds up more and more until it reaches high levels of saturation.

**What happens if you don't do a regen?** A DPF Filter that is too full or not properly functioning threatens both the environment and the truck. The engine can derate when a needed regen does not occur, potentially causing downtime by leaving the vehicle in a state that is either undriveable or in "limp mode" where it can only operate at slow speeds.

**Can I stop a parked regen?** Parked regeneration can be initiated by selecting OK when the driver message center displays "Parked Regen Required" or "Parked

Regen Available". A parked regeneration is allowed when the DPF lamp is illuminated. A parked regeneration can be stopped by selecting OK while the regeneration is in progress.

**How do you force a regen on a Massey Ferguson tractor?**

**What tractors don't have regen?**

**What happens if you stop a regen early?** Failure of a regen may lead to an engine shut down. Pay attention to your CEL (Check Engine Light) as this may disable a DPF regen process. There are multiple reasons that may prevent a DPF regen. These include, but are not limited to, a clogged DPF filter, EGR fault codes, your VGT turbo operation.

**Is New Holland better than Massey Ferguson?** Massey Ferguson Tractors are comparatively better New Holland tractors are quality tractors, but when we compare them with Massey Ferguson, we get significantly lesser fuel capacity. A 35-horsepower Massey Ferguson outperforms a New Holland tractor with the same

horsepower.

**Does Massey Ferguson have regen?** It uses active regeneration and initiates regen, when necessary, without operator assistance. There are also minimal maintenance requirements with this system.

**How do you manually initiate regen?**

**How do you force a diesel to regen?**

**Should I force a regen?** Often, a forced regeneration is a necessary action to either correct the issue at hand or get the vehicle out of limp mode long enough to get it to a service center.

**What happens if you don't do a regen?** Failure to perform a forced regen when notified by your vehicle's indicator system can cause severe engine damage.

**When should I manually regen?** Manual regeneration is often required when vehicles are driven at insufficient speed to allow regeneration to be carried out automatically by their engine management control software.

**What happens when a diesel goes into regen?** The parked regen, sometimes called a DPF Regeneration, is a self-cleaning process that occurs when soot builds up inside the Diesel Particulate Filter (DPF). The DPF helps to maintain efficient, environmentally friendly rental trucks while meeting Environmental Protection Agency (EPA) emissions requirements.

**What happens if you interrupt a regen?** Regeneration, or regen, of the DPF filter, is the process that burns the soot accumulation that is inside the DPF filter. If you can no longer start a regen then you will eventually get stuck in a derate which will then lead to an engine shut down.

**How long should a parked regen take?** How long does a parked DPF regen take? It takes approximately 20-60+ minutes. It will continue to regen until the soot level has reached 'low' or '0%.' Some trucks will let you monitor your soot level gauge on the dashboard.

**How do you trigger DPF regeneration?** In most cases, driving for 10 minutes at 65 km/h (about 40 mph) or faster will ensure proper regeneration. If the driver doesn't take the appropriate action, however, the soot accumulation reaches 75 % and another warning light should appear.

**How often does a diesel engine regen?** How Often Does Regeneration Occur? The frequency of DPF regeneration can vary depending on how often you drive your car and the type of engine you have. Active regeneration happens roughly every 300 miles and is triggered by your car's ECU once soot levels are approaching 40 to 45%.

**How do I do a parked regen?** ? Request a "PARKED REGEN" ? Push and hold REGEN button (far left bottom switch) for 5 seconds and release. ? Idle should increase on its own, REGEN will start. ? DPF light will go out shortly after starting, REGEN is continuing until a return to idle. (45-60) minutes.

**Can I regenerate my DPF filter myself?** Driving for over 10 minutes at speeds in excess of 40mph will often be sufficient to clear the blockage and regenerate the DPF. You should consult the handbook for your vehicle for more specific guidance on how you should drive to initiate regeneration of the DPF and clear the warning light.

**What is the best scan tool for DPF regeneration?** SmartSafe iSmartLink D01 is a highly-rated OBD2 scanner for DPF regeneration.

**Why is forced regeneration bad?** The forced regeneration process can take up to 30 minutes. DPFs require more maintenance than catalytic converters. The ash from the engine oil accumulates on the inner walls of the ceramic and in the pores. This increases the pressures in the DPF and if clogged, can even damage the engine.

**Is it OK to stop a parked regen?** A parked regeneration is allowed when the DPF lamp is illuminated. A parked regeneration can be stopped by selecting OK while the regeneration is in progress. The parked regeneration may take up to 45 minutes. To avoid injury from inhaling engine exhaust, always operate the engine in a well-ventilated area.
