Utilizing them together can create a strong contrast in an artwork. Analogous colors are located next to each other on the wheel, such as blue, blue-green, and green.

What is the color theory for beginners? The three primary colors are red, yellow and blue. In traditional color theory these are the 3 colors that cannot be formed by mixing any combinations of other colors. All other colors are derived from mixing these three colors. Secondary colors form the next most basic of the standard color wheels.

What is the rule of color theory? The rule states to use primary, secondary and tertiary colors in 60%, 30% and 10% proportions, respectively. When using a complementary combination scheme, the rules are different. In this type of palette, we will use colors directly opposite each other on the color wheel.

What does the color theory represent? In its simplest terms, color psychology has become a popular area of color theory that assigns emotional and psychological connotations between colors and emotions. What emotion do colors represent? Warm colors (red, orange, and yellow) are generally thought to evoke feelings of happiness, optimism, energy, and passion. They can also be associated with excitement, danger, and anger. Cool colors (blue, green, and purple) are often described as calm, but can also call to mind feelings of sadness or indifference.
