- $|x| = x$ jika $x \geq 0$
- $|x| = -x$ jika $x < 0$

Paragraf 2:

Soal 1: Tentukan nilai mutlak dari $|5|$ dan $|-7|$.

Pembahasan:

- $|5| = 5$ (karena $5 \geq 0$)
- $|-7| = -(-7) = 7$ (karena $-7 < 0$)

Paragraf 3:

Soal 2: Sederhanakan persamaan berikut: $|-2x + 3| = 7$.

Pembahasan:

Persamaan tersebut dapat dipecahkan menjadi dua kasus:

- Kasus 1: $-2x + 3 \geq 0$ ($x \leq 1,5$)
- Kasus 2: $-2x + 3 < 0$ ($x > 1,5$)

Untuk kasus pertama, persamaannya menjadi $-2x + 3 = 7$, sehingga $x = -2$. Untuk kasus kedua, persamaannya menjadi $-(2x + 3) = 7$, sehingga $x = -5$.

Paragraf 4:

Temperature and Thermometers: Understanding the Physics

What is temperature?

Temperature is a measure of the average kinetic energy of particles in a substance. The higher the temperature, the faster the particles move. Temperature can be measured in different units, such as degrees Celsius ($^{\circ}\text{C}$), degrees Fahrenheit ($^{\circ}\text{F}$), or Kelvin (K).

What is a thermometer?

A thermometer is a device used to measure temperature. There are various types of thermometers, including liquid-in-glass thermometers, digital thermometers, and infrared thermometers.

How do liquid-in-glass thermometers work?

Liquid-in-glass thermometers contain a liquid, such as mercury or alcohol, that expands or contracts as temperature changes. As the temperature rises, the liquid expands and rises in the tube. The scale on the thermometer is used to read the temperature.

What are the advantages of digital thermometers?

Digital thermometers are more accurate and precise than liquid-in-glass thermometers. They are also easier to read and can be used to measure a wide range of temperatures.

How do infrared thermometers work?

Infrared thermometers measure the amount of infrared radiation emitted by an object. The higher the temperature of the object, the more infrared radiation it emits. Infrared thermometers are non-contact thermometers, meaning that they can measure temperature from a distance without touching the object.
