**What is the difference between remote sensing and GIS?** Remote sensing is a surveying and data collection technique, used to survey and collect data regarding an object while GIS is a computer system that consists of software used to analyze the collected data and hardware that the software would operate in.

**What is the role of remote sensing in land use?** Remote sensing facilitates the sustainable planning and development of urban spaces by providing detailed information on land cover, infrastructure, and environmental conditions. This data is crucial for managing urban growth, improving infrastructure, and enhancing the quality of life for city dwellers.

**Why is remote sensing important?** Remote sensing contributes to scientific knowledge by providing valuable information about the Earth's surface. This includes data on location, depth, biomass, temperature, moisture content, and more. Researchers can use this information to understand various environmental processes better.

**What is the use of remote sensing in plant breeding?** Traditionally, remote sensing is used to estimate spatial trends across the landscape, while plant phenotyping aims to remove spatial effects in their data in order to investigate the genetic effects of different plant varieties in response to the prevailing environmental conditions.

Precision management, including fertilizer, pesticide, irrigation, etc.

**What is remote sensing for plant analysis?** This study describes a new method for satellite-based remote sensing analysis of plant-specific biomass yield patterns for precision farming applications. The relative biomass potential (rel. BMP) serves as an indicator for multiyear stable and homogeneous yield zones.

**How does remote sensing help farmers improve their techniques with less impact on the environment?** By assessing vegetation moisture levels and evapotranspiration rates, it helps farmers determine the precise water requirements of their crops. This information enables them to implement efficient irrigation strategies, reducing water waste, and ensuring that crops receive adequate moisture for optimal growth.

**What are five examples of sensors that can be used in agriculture?**

**What are the disadvantages of crop sensor?** Crop sensor cons With the image circle hitting a smaller recording medium, your ability to capture wide-angle shots is definitely limited by a crop sensor. While you can compensate by using extra-wide angle lenses on crop-sensor cameras, you're likely to get some distortion at the edges of your images.

**What are the disadvantages of agriculture sensors?** While sensors generate an enormous amount of data, a lot of it is not analysed and used in useful ways on farm (ACIL Allen Consulting, 2018). Furthermore, connectivity issues can hinder gathering, storing and leveraging of rich farm data insights (ACIL Allen Consulting, 2018).

**How to use remote sensing in agriculture?** Crop Production Forecasting: Remote sensing is used to forecast the expected crop production and yield over a given area and determine how much of the crop will be harvested under specific conditions. Researchers can be able to predict the quantity of crop in a given farmland over a given period.

**What are the advantages of remote sensing in soil survey?** Radar remote sensing enables the assessment of soil moisture content, surface roughness, and texture. These techniques contribute to a better understanding of soil dynamics and support informed decision-making in agriculture, land management, and environmental studies.

**How is remote sensing used in problematic soil?** Problematic soils are identified and managed with the use of remote sensing. It assists in identifying regions with soil problems, such as salinity or alkalinity, and offers suggestions for mitigation

through satellite imaging and aerial data.

**What is remote sensing for crop protection?** Remote sensing allows for the early detection of various crop issues, which is crucial for timely interventions. By analyzing spectral data, agronomists can identify pest infestations, diseases, and nutrient deficiencies before they become visible to the naked eye.

**What is the role of remote sensing in land use?** Remote sensing facilitates the sustainable planning and development of urban spaces by providing detailed information on land cover, infrastructure, and environmental conditions. This data is crucial for managing urban growth, improving infrastructure, and enhancing the quality of life for city dwellers.

**What is remote sensing in plants?** Remote sensing allows us to observe plants across spatial and temporal scales that are inaccessible using ground-based methods alone. Observations from remote sensing are, by definition, physically removed from the organisms that we wish to study.

**What is remote monitoring in agriculture?** A remote crop monitoring system in precision agriculture refers to the use of various technologies and tools to monitor and manage crops from a distance.

### **The Serpent of Light Beyond 2012: A Q&A with Drunvalo Melchizedek**

The Mayan calendar has predicted a great shift in consciousness for 2012. In his book "The Serpent of Light Beyond 2012," Drunvalo Melchizedek offers a unique perspective on this momentous event.

#### **1. What is the significance of the Serpent of Light?**

The Serpent of Light is a symbol of the kundalini energy that resides within us all. When this energy rises to our crown chakra, it activates our full spiritual potential. Melchizedek believes that the Serpent of Light will be fully activated in 2012.

#### **2. How can we prepare for the shift in consciousness in 2012?**

Melchizedek recommends that we release our fears, open our hearts to love, and connect with our Higher Selves. He also suggests practicing meditation and other

spiritual practices to raise our vibrations.

### **3. What will the world be like after 2012?**

Melchizedek believes that the world will enter a new age of enlightenment and cooperation. He says that we will experience a greater sense of unity, peace, and love.

### **4. What role do we play in the shift in consciousness?**

Melchizedek says that we are all cocreators of our reality. By choosing love and compassion, we can help to shape the future of our planet.

### **5. Is the Mayan calendar accurate?**

Melchizedek believes that the Mayan calendar is a symbolic representation of the cosmic cycles that govern our lives. He says that the shift in consciousness predicted by the calendar is real and must be embraced.

**Is Tariq Ramadan A salafi?** Ramadan describes himself as a "Salafi reformist".

**Is Tariq Ramadan still at Oxford?** He has also denied those allegations. Ramadan took early retirement from Oxford in June 2021.

**Do Salafis reject Madhabs?** Contemporary Salafis generally discard the practice of adhering to the established rulings of any particular Madhhab, condemning the principle of Taqlid (blind imitation) as a bid'ah (innovation) and are significantly influenced by the legal principles of the Zahirite school, historically associated with anti-madhhab ...

**Can a Salafi follow a madhab?** Salafi means following Quran Authentic Hadith and interpretation of Prophet and Companions. it is not the madhabs one should follow but the true words of Prophet and decisions based on true ahadith that one should follow whether they exist in any fiqh or any book.

**What happened to Tariq bin Ziyad?** Answer and Explanation: Tariq ibn Ziyad died in Damascus in 720. He was recalled from Hispania in 714 by Umayyad Caliph Al-Walid I and spent the remainder of his life in Damascus until he passed. The cause of death is unknown.
