The Martian Principles for Successful Enterprise Systems: 20 Lessons Learned from NASA's Mars Exploration

Enterprise systems are critical to the success of modern businesses. They provide the foundation for core business processes, such as customer relationship management, supply chain management, and human resources. However, enterprise systems can also be complex and expensive to implement and maintain.

NASA's Mars exploration program has been a pioneer in the use of enterprise systems. Over the past two decades, NASA has developed and deployed a number of complex enterprise systems to support its Mars missions. These systems have helped NASA to achieve a number of successes, including the landing of the Curiosity rover on Mars in 2012.

In this article, we will discuss 20 lessons that NASA has learned from its Mars exploration program that can be applied to the development and implementation of enterprise systems in other organizations.

1. Define a clear vision and scope for the system.

One of the most important lessons that NASA has learned is the importance of having a clear vision and scope for the system that is to be developed. This vision should be aligned with the overall business goals of the organization, and it should provide a roadmap for the development and implementation of the system.

2. Establish a strong governance structure for the system.

Another important lesson that NASA has learned is the importance of establishing a strong governance structure for the system. This governance structure should provide oversight and direction for the development and implementation of the system, and it should ensure that the system is aligned with the overall business goals of the organization.

3. Use a phased approach to development and implementation.

NASA has found that it is often helpful to use a phased approach to the development and implementation of enterprise systems. This approach allows NASA to break down the project into smaller, more manageable pieces, and it reduces the risk of the project failing.

4. Involve stakeholders throughout the development process.

NASA has also found that it is important to involve stakeholders throughout the development process. This involvement ensures that the system meets the needs of the users, and it helps to build buy-in for the system.

5. Test the system thoroughly before implementing it.

NASA has learned the importance of testing the system thoroughly before implementing it. This testing helps to identify and fix any bugs or issues that could cause the system to fail.
