**How many questions is the NIHSS test?** The NIHSS is composed of 11 items, each of which scores a specific ability between a 0 and 4. For each item, a score of 0 typically indicates normal function in that specific ability, while a higher score is indicative of some level of impairment.

**How to pass NIHSS certification?** To pass the exam, you must score 90 test items with at least 84 answered correctly. The 11 sections of the test include the level of consciousness, best gaze, visual, facial palsy, motor arm, motor leg, limb ataxia, sensory, best language, dysarthria, extinction, and inattention.

**What is a passing score for the NIH Stroke Scale?** The NIHSS certification test is not timed and may be repeated as many times as desired to obtain a passing score or to improve your score. A score of 93% or greater is required for successful completion to become NIH Stroke Scale certified and to receive the appropriate certificate.

**What are the cut offs for NIHSS?** Very Severe: >25. Severe: 15 – 24. Mild to Moderately Severe: 5 – 14. Mild: 1 – 5'

**What is a score of 22 on the NIHSS?** 1–4 = minor stroke. 5–15 = moderate stroke. 15–20 = moderate/severe stroke. 21–42 = severe stroke.

**What is a 25 NIHSS score?** Stroke severity may be stratified on the basis of NIHSS scores as follows (Brott et al, 1989): Very Severe: >25. Severe: 15 – 24. Mild to Moderately Severe: 5 – 14.

**How many years is NIHSS certification good for?** The NIH Stroke Scale certification for Patient Group A is valid for one year from the initial testing date, but the expiration for Patient Groups B - F is two years from the testing date.

**Can you get NIHSS online?** The American Stroke Association, in conjunction with the American Academy of Neurology (AAN) and the National Institute of Neurological Disorders and Stroke (NINDS) has developed this CME/CE certified, online training program for healthcare professionals to learn or review how to administer the NIH Stroke Scale for ...

**What is the best NIHSS score?** The scale is made up of 11 different elements that evaluate specific ability. The score for each ability is a number between 0 and 4, 0 being normal functioning and 4 being completely impaired. The patient's NIHSS score is calculated by adding the number for each element of the scale; 42 is the highest score possible.

**What is a bad NIHSS score?** The NIHSS was considered as significant for a score of >7 associated with bad prognosis, increased risk of death, and severe disability, and for a score of 3.

**What is a perfect NIH score?** A: Reviewers assign a criterion score from 1 to 9, where 1 is best, to each core NIH review criterion (significance, investigator, innovation, approach, environment).

**How often should NIHSS be done?** Obtain full NIHSS scores a minimum of every 2 hours for the first 24 hours during reperfusion; after that obtain full NIHSS scores at least every 4 hours, increasing the time between assessments as dictated by changes in a patient's status.

**What NIHSS score is fall risk?** Conclusion: Poststroke patients at risk of falls can be identified by an NIHSS score of  $\geq 4$ .

**What is the first thing measured in the NIH Stroke Scale?** Level of Consciousness: 1 = Not alert; but arousable by minor stimulation to obey, answer, or respond.

**What does NIHSS 3 mean?** 0 = No visual loss. 1 = Partial hemianopia. 2 = Complete hemianopia. 3 = Bilateral hemianopia (blind including cortical blindness).

**How do you interpret NIHSS score?** The scoring range is 0 to 42 points, with higher numbers indicating greater severity. A score of 0 represents no stroke symptoms or a minor stroke, a score of 1 to 15 represents a moderate stroke, a score of 16 to 20 represents a moderate to severe stroke, and a score of 21 to 42 represents a severe stroke.

**What is neglect in NIHSS?** Extinction and Inattention (formerly Neglect): If the patient has a severe visual loss preventing visual double simultaneous stimulation, and the cutaneous stimuli are normal, the score is normal. If the patient has aphasia but does appear to attend to both sides, the score is normal.

**What is the mnemonic for the NIH Stroke Scale?** BE-FAST indicates Balance, Eyes, Face, Arm, Speech, Time; and NIHSS, National Institutes of Health Stroke Scale.

**How long is NIHSS certification good for?** NIH Stroke Scale certification is good for one year after someone initially receives certification. After that initial renewal, recertification is needed every two years. The renewal process after that first year

includes completing continuing education courses.

**How to tell severity of stroke?** The National Institute of Health Stroke Scale (NIHSS) Brain functions including consciousness, vision, sensation, movement, speech, and language are measured when evaluating stroke severity. The larger the NIH stroke score, the more devastating the damage to brain functions.

**What is NIHSS score 16?** Conclusions: The NIHSS score strongly predicts the likelihood of a patient's recovery after stroke. A score of ≥16 forecasts a high probability of death or severe disability whereas a score of ≤6 forecasts a good recovery. Only the TOAST subtype of lacunar stroke predicts outcomes independent of the NIHSS score.

**How many items are on the NIHSS?** The NIHSS is a 15-item impairment scale, intended to evaluate neurologic outcome and degree of recovery for patients with stroke. 20% of cases are a hemorrhage in the brain caused by a rupture or leakage from a blood vessel.

**What is a 3 score on NIHSS?** A 3 is scored only if the patient makes no movement (other than reflexive posturing) in response to noxious stimulation. 0 = Alert; keenly responsive. 1 = Not alert, but arousable by minor stimulation to obey, answer, or respond.

**What is a 2 NIH score?** A score of 2, "severe or total sensory loss," should only be given when a severe or total loss of sensation can be clearly demonstrated. Stuporous and aphasic patients will, therefore, probably score 1 or 0. The patient with brainstem stroke who has bilateral loss of sensation is scored 2.

**What is the best NIHSS score?** The scale is made up of 11 different elements that evaluate specific ability. The score for each ability is a number between 0 and 4, 0 being normal functioning and 4 being completely impaired. The patient's NIHSS score is calculated by adding the number for each element of the scale; 42 is the highest score possible.
