Schaum's Outline of Vector Analysis Solution Manual: A Comprehensive Guide

Schaum's Outline of Vector Analysis, a renowned textbook by Murray R. Spiegel, provides an accessible and comprehensive introduction to vector analysis. Its accompanying solution manual, authored by N.H. Volk, offers detailed solutions to the textbook's numerous practice problems.

Question 1: Finding the Gradient of a Scalar Function

Consider the scalar function $f(x,y) = x^2 + y^2$. Find the gradient of f .

Solution:

The gradient of f , denoted by $\text{grad } f$, is given by: $\text{grad } f = \left(\frac{\partial f}{\partial x}\right)\mathbf{i} + \left(\frac{\partial f}{\partial y}\right)\mathbf{j}$ where \mathbf{i} and \mathbf{j} are unit vectors. Therefore, $\text{grad } f = (2x)\mathbf{i} + (2y)\mathbf{j}$

Question 2: Computing a Surface Integral

Calculate the surface integral of the vector field $F = xz\mathbf{i} + yz\mathbf{k}$ over the surface S given by $z = x^2 + y^2$, $0 \leq z \leq 1$.

Solution:

Using the divergence theorem, we can convert the surface integral into a volume integral: $\iint_S \mathbf{F} \cdot d\mathbf{S} = \iiint_V (\text{div } \mathbf{F}) dV$ where $\text{div } \mathbf{F}$ is the divergence of \mathbf{F} . Thus, $\iint_S \mathbf{F} \cdot d\mathbf{S} = \iiint_V (2z) dV = 1/3$

Question 3: Finding the Conservative Vector Field

Determine whether the vector field $F = (x^2 - y)\mathbf{i} + (-x + y^2)\mathbf{j}$ is conservative.

Solution:

A vector field is conservative if its curl is zero. The curl of F is given by: $\text{curl } F = \left(\frac{\partial P}{\partial y} - \frac{\partial Q}{\partial x}\right)\mathbf{k}$ where $F = P\mathbf{i} + Q\mathbf{j}$. Therefore, $\text{curl } F = (2y - (-1))\mathbf{k} = (2y + 1)\mathbf{k} \neq 0$. Since the curl is not zero, the vector field is not conservative.

Question 4: Evaluating a Line Integral

Calculate the line integral of the vector field $F = (x - y)\mathbf{i} + (y + z)\mathbf{j}$ along the curve C given by $\mathbf{r}(t) = t\mathbf{i} + t^2\mathbf{j}$, $0 \leq t \leq 1$.

Solution:

$$\int_C \mathbf{F} \cdot d\mathbf{r} = \int_{[0,1]} (t - t^2) dt + (t^2 + t) dt = \int_{[0,1]} (1 - t + t^2) dt = 3/2$$

Question 5: Applying Stokes' Theorem

Use Stokes' theorem to evaluate the line integral of the vector field $\mathbf{F} = x\mathbf{i} + y\mathbf{j} + z\mathbf{k}$ around the boundary of the surface S given by $z = x^2 + y^2$, $0 \leq z \leq 1$.

Solution:

Stokes' theorem relates a line integral around a boundary to a surface integral over the surface enclosed by the boundary. Thus, $\int_C \mathbf{F} \cdot d\mathbf{r} = \iint_S (\text{curl } \mathbf{F}) \cdot d\mathbf{S}$ where C is the boundary of S . Since the curl of \mathbf{F} is $(2z)\mathbf{k}$, $\int_C \mathbf{F} \cdot d\mathbf{r} = \iint_S (2z) dx dy = 2\pi/3$
