What tuning system did Harry Partch experiment with? Partch composed with scales dividing the octave into 43 unequal tones derived from the natural harmonic series; these scales allowed for more tones of smaller intervals than in standard Western tuning, which uses twelve equal intervals to the octave.

What tuning system did Beethoven use? Composers like Bach and Beethoven didn't tune their keyboard instruments to the equal tempered tuning system we use today. They used and exploited unequal temperaments, giving subtle characteristics to each key — which are completely lost in equal temperament.

What frequency did Bach tune to? When Bach wrote his Mass in B minor, A (the note the orchestra tunes to) was around 415 Hz, though that changed depending on what country or city you were in.

Why is 3/2 called a fifth? The justly tuned pitch ratio of a perfect fifth is 3:2 (also known, in early music theory, as a hemiola), meaning that the upper note makes three vibrations in the same amount of time that the lower note makes two.

Is just intonation the same as Pythagorean tuning? Applying the first part of this concept, some scholars refer to Pythagorean tuning as "3-limit just intonation," since all intervals are derived either from fifths (3:2) or octaves (2:1), ratios involving 3 as the largest prime.

Did Pythagoras discover the octave? Pythagoras is attributed with discovering that a string exactly half the length of another will play a pitch that is exactly an octave higher when struck or plucked. Split a string into thirds and you raise the pitch an octave and a fifth. Split it into fourths and you go even higher – you get the idea.
