

PROFITABILITY AND CONSTRAINTS OF PINEAPPLE PRODUCTION IN

[Download Complete File](#)

What are the constraints of pineapple production? The main constraints are: lack of high quality planting materials, high fruit perishability, low fruit price, lack of access to formal credits and plant diseases.

What are the problems with pineapple farming? After the land is used for growing pineapples, it has little function other than as a breeding ground for environmental problems like soil erosion, sedimentation and deforestation.

What is the profit of pineapple? Pineapple contains nutrients and beneficial compounds, such as vitamin C, manganese, and enzymes, to help aid digestion. Eating pineapple may help boost immunity, lower cancer risk, and improve recovery time after surgery. Pineapple (*Ananas comosus*) is a tropical fruit.

What are the factors affecting pineapple? The regression analysis revealed the major factors that significantly affected pineapple production in the area include farm size, labour, cost of fertilizer and cost of pineapple suckers.

What are the pros and cons of pineapple? Pineapple is rich in nutrients and health-promoting elements like vitamin C, manganese, and digestive enzymes. However, consuming too many pineapples may result in a number of symptoms like heartburn and nausea. Serving sizes should be considered by diabetics in order to maintain stable blood sugar levels.

What are the threats to pineapples? Intense solar radiation poses significant risks to fruit quality, including sunburn and severely misshapen fruits. Direct exposure of pineapple plants to sunrays during flowering causes an increase in fruit damaged by

corky roots, reducing the overall quality and appearance of the fruit, diminishing its market value.

What are the negative impacts of pineapple? The juice from unripe pineapples can cause severe vomiting. Bromelain ingestion is associated with a low incidence of adverse reactions, including diarrhea, excess menstrual flow, nausea, skin rash, and vomiting. Swelling of the mouth and cheeks can result from eating large amounts of the fruit.

What is the lifespan of a pineapple plant? A pineapple plant can live for several years under proper care and growing conditions. Generally, pineapple plants can remain productive for up to 5 to 7 years, providing fruit throughout their lifespan.

Which state is the largest producer of pineapple? Though Assam has the largest area under pineapple West Bengal is the largest producer.

Who buys the most pineapples? Imports In 2022 the top importers of Pineapples (Fresh/Dried) were United States (\$695M), China (\$159M), Japan (\$139M), Canada (\$135M), and Spain (\$121M).

How can I increase my pineapple production? Plant your pineapples in a regular spacing to improve productivity and maximize your yield. The soil should not be water-logged or completely dry.

What causes losses in pineapple? The causes of losses were identified as the area of land cultivated, transport cost, distance from farm to market, days fruit spend on farm and number of bruised fruits.

How do you increase the yield of a pineapple? Water and Wait Pineapples are not needy plants. They're happy with little water and little care, but when you water them regularly and feed them on good stuff, they reward you with faster growth and bigger fruit.

What does eating pineapple everyday do to your body? The vitamins and minerals in pineapple could help shorten viral and bacterial infections and strengthen your bones. There's also a little evidence that pineapple may help prevent cancer and even help fertility by improving the quality of sperm.

What to avoid when buying pineapple? Some green is fine, but avoid pineapples that are entirely dark green (underripe) or are dark yellow or orange (overripe). If you're not sure, check the bottom of the pineapple: Its color will give you the best sense of whether or not it's ready.

Is it okay to eat an entire pineapple? Yes! It is safe to eat the core of a pineapple. Although it is less juicy and slightly more bitter compared to the flesh that surrounds it, there is nothing unsafe about eating a pineapple core.

What affects pineapple production? The environment has an impact on pineapple production and contributes to many losses of fresh fruits, particularly during the harvesting process, which consists of several stages [11]. One of the environmental factors that has a negative impact on pineapple production losses is climate change.

What is the disadvantage of pineapple? Weight gain: Because pineapple contains a good amount of natural sugar, beware of drinking too much or you may risk gaining weight. Toxicity: Unripe pineapple juice can cause toxicity in your gut and result in symptoms such as vomiting and diarrhea. Make sure the juice is made from ripe pineapples.

Is pineapple high risk? High risk foods may even become stuck in the oesophagus. Stringy, fibrous textures e.g. runner beans, celery, pineapple, lettuce, mangetout peas, bacon, gammon. Crumbly food e.g. bread crusts, pie crusts, crumble, dry biscuits. Hard foods e.g. boiled and chewy sweets and toffees, nuts and seeds.

Is growing pineapples bad for the environment? Pineapples grow as individual plants which have carbon-sequestering properties. This means they store carbon within the soil, reducing their carbon footprint. However, pineapples are also grown in monocultures. Monocultures are terrible for biodiversity as they limit pollination, soil microbes, and other wildlife.

When should you not eat pineapple? Bromelain can also interact with some medications. Those taking antibiotics, anticoagulants, blood thinners, anticonvulsants, barbiturates, benzodiazepines, insomnia drugs and tricyclic antidepressants should be careful not to eat too much pineapple.

Why are pineapples unsustainable? Pineapples are a fairly unsustainable fruit. They contribute to rainforest destruction, use monoculture farming, high amounts of pesticides, and plastic packaging. However, they also have a low carbon footprint and don't require a significant amount of irrigation.

What are the constraints of citrus production? Some of the factors limiting production are lack of capital, pests, diseases, soil fertility problems, scarcity of large quantities of high yielding varieties, scarcity of early maturing true-to-type planting materials, high cost of labour for farm operations, lack of information on the use of agro-chemicals, ...

What are the conditions for growing pineapples? Soils. Pineapple plants grow best in moderately fertile, sandy loam soils of neutral to mildly acid pH. Plants will grow satisfactorily in sandy and calcareous soils with attention to watering and fertilizer. Pineapple should be grown in well-drained soils and areas of the landscape that do not flood.

Is there a pineapple shortage? The pineapple shortage has prompted a continuous increase in prices, worsening the situation for both producers and consumers. With supply unable to meet demand, prices surge. This upward trend in pricing is expected to persist until there is a significant improvement in crop production and supply chain stability.

What influences pineapple production? Quality of pineapple varies due to cultivation technique, growing environment and variety. Good quality pineapple grows well in acidic loams, sandy loams and clay loams soils under warm and humid climate with sunny days and cool nights. Pineapples need a neutral to mildly acidic soil ranging pH from 4.5 to 6.5.

What are the threats to the citrus industry? However, in the past two decades, the U.S. citrus industry has faced many challenges—serious disease problems, weather damage, import competition, dwindling farm-retail price spread, and labor shortages—threatening its survival.

What are the production constraints in horticulture? Inefficiency in pest management, low/ non-availability of credit, high cost of production, lack of

information, huge post-harvest losses, lack of infrastructure like roads, cold storage, adequate space, poor market intelligence, high transportation cost, etc. are the other constraints.

What are the factors affecting citrus fruit? The most important nutrients influencing fruit quality are nitrogen, phosphorus and potassium. However, when any other nutrient is deficient or in excess, fruit yield and quality are negatively altered. Nitrogen (N) increases juice content, TSS per box and per acre, and acid content.

What is the best climate to grow pineapples in? Pineapple grows in warm and humid climate. It is mostly grown at low elevations in areas with a temperature range of 15 to 30°C. It is tolerant to drought because of the special water storage cells. However, high temperature over 35°C is unfavourable for the development of fruits.

Are pineapples hard to grow? Just about anyone with enough space and patience can grow a pineapple. This tropical fruit is hardy only in USDA zones 11 and 12, but you can grow it indoors in your home or a hobby greenhouse. All you need is the crown of a grocery store pineapple, a large pot with space to put it, and lots and lots of time.

How many years will a pineapple plant produce? A pineapple plant can live for several years under proper care and growing conditions. Generally, pineapple plants can remain productive for up to 5 to 7 years, providing fruit throughout their lifespan.

Who is the largest pineapple supplier?

Where does the US get most of its pineapples? Most U.S.-grown pineapple still comes from either Hawaii or Puerto Rico, though there is small-scale production in parts of Florida and California. The bulk of pineapple consumed in the United States comes from imports by way of Central and South American or Mexican grower-shippers.

In what US state are 75% of world's pineapples grown? The first pineapples to arrive in the U.S. in the 1800s were from the Bahamas and Cuba. But when James Dole established the Hawaiian Pineapple Company, it took off. By the late 1920s, Hawaii was producing more than 75 percent of the world's pineapple.

What are the threats to pineapples? Intense solar radiation poses significant risks to fruit quality, including sunburn and severely misshapen fruits. Direct exposure of pineapple plants to sunrays during flowering causes an increase in fruit damaged by corky roots, reducing the overall quality and appearance of the fruit, diminishing its market value.

Who are the top three producers of pineapple? In 2022, Indonesia, the Philippines, and Costa Rica were the top three pineapple producers worldwide. Costa Rica generated 2.9 million metric tons of pineapples in that year. Overall pineapple production in that year amounted to around 29.4 million metric tons.

What is the biggest pineapple plantation in the world? In 1922, Dole bought the Hawaiian Island of Lana'i and transformed it into the largest pineapple plantation in the world, with 20,000 farmed acres and a planned plantation village to house more than a thousand workers and their families.

Twisting Arms: Court Referred and Court Linked Mediation

Introduction

Courts increasingly recognize mediation as an effective dispute resolution tool. However, questions arise regarding the involvement of the court in mediation, particularly when it's court referred or court linked. This article provides answers to common questions about these mediation types.

Q1: What is Court Referred Mediation?

A: In court referred mediation, the court mandates the parties to participate in mediation before the case can proceed to trial. The parties are typically referred to a specific mediator or mediation service.

Q2: What is Court Linked Mediation?

A: Court linked mediation is similar to court referred mediation, but it's more voluntary. The court encourages the parties to consider mediation but does not make it mandatory. The court may provide a list of mediators or mediation services for the parties to choose from.

Q3: What are the Benefits of Court Referred and Court Linked Mediation?

A: Court referred and court linked mediation offer several benefits, including:

- **Early resolution:** Mediation can help resolve disputes early on, saving time and legal costs.
- **Improved outcomes:** Mediated agreements are often mutually acceptable to both parties, leading to more lasting solutions.
- **Reduced stress:** Mediation provides a less adversarial and stressful environment for dispute resolution.

Q4: Are Court Referred and Court Linked Mediation Binding?

A: Typically, mediation is confidential and non-binding. However, if the parties reach an agreement during mediation, it can be formalized into a binding settlement agreement that is enforceable by the court.

Q5: Is Court Referred or Court Linked Mediation Right for Me?

A: Whether court referred or court linked mediation is appropriate for a particular dispute depends on various factors, including the nature of the dispute, the parties involved, and the parties' willingness to compromise. Consulting with an attorney or a mediator can help you determine the best course of action for your situation.
