

Biology project on aids for class 12

Download Complete File

Which topic is best for a project in biology class 12?

What is AIDS class 12th biology? AIDS or Acquired Immune Deficiency Syndrome is a disease caused by the HIV virus. In this condition, a person's immune system becomes too weak to fight any kind of infection or disease. AIDS is usually the last stage of HIV infection; a stage where the body can no longer defend itself and thus spawns various diseases.

What are AIDS in biology? What is AIDS? AIDS stands for acquired immunodeficiency syndrome. It is the final stage of infection with HIV. It happens when the body's immune system is badly damaged because of the virus. Not everyone with HIV develops AIDS.

What is the name of the test for AIDS Class 12? ELISA stands for Enzyme Linked Immunosorbent Assay. This test is designed to detect the presence of HIV antibodies and antigens in the blood.

Which topic is best for a biology project?

How do I choose my project topic?

How to prevent AIDS class 12?

What is the full topic of AIDS? AIDS stands for acquired immunodeficiency syndrome. AIDS is the most advanced stage of HIV infection. HIV attacks and destroys the infection-fighting CD4 cells (CD4 T lymphocyte) of the immune system. The loss of CD4 cells makes it difficult for the body to fight off infections, illnesses, and certain cancers.

What is AIDS IB biology? HIV and AIDS are not the same thing: HIV is the name used for the specific virus that is infecting the host. AIDS is the acronym used to describe the syndrome that the virus, HIV, causes.

What are AIDS examples? AIDS-defining illnesses are opportunistic infections, certain cancers (usually caused by viruses) and some neurological conditions. They include: Burkitt lymphoma. Candidiasis of bronchi, esophagus, trachea or lungs.

What are 3 AIDS defining diseases?

What are the main types of AIDS? There are two types of HIV, HIV-1 and HIV-2, as well as several related viruses that infect certain monkeys or great apes. HIV-1 can be found throughout the world, but HIV-2 is almost exclusively limited to West Africa. HIV-1 is transmitted more easily than HIV-2, and HIV-1 infection progresses more rapidly to AIDS.

What is AIDS 12th biology? AIDS is commonly considered to be the last stage of HIV infection; the body completely loses its defense system and this further causes illness. Loss of immunity causes organ failure and ultimately death. HIV is a type of retrovirus. Its genetic material is RNA and is called the human immuno deficiency virus.

Which technique is used to detect AIDS? The primary tests for diagnosing HIV and AIDs include: ELISA test. ELISA, which stands for enzyme-linked immunosorbent assay, is used to detect HIV infection. If an ELISA test is positive, the Western blot test is usually administered to confirm the diagnosis.

What is the main test for AIDS? An antigen/antibody test looks for both HIV antibodies and antigens. Antigen/antibody tests are recommended for testing done in labs and are common in the United States. This lab test involves drawing blood from a vein. There is also a rapid antigen/antibody test available that is done with blood from a finger stick.

What is the hardest topic in biology? Protista, Monera, and Virus were the first, second, and third most difficult topics in X grade. Genetics, Immune System, and Metabolism also selected into three topics of all grades that were considered most difficult by undergraduate students majoring in Biology.
