Questions and Answers on Key Concepts

Question: Define a relation and provide an example. **Answer:** A relation is a set of ordered pairs from a Cartesian product. For instance, the relation "is greater than" is a subset of the Cartesian product of real numbers.

Question: Explain the principle of inclusion-exclusion. **Answer:** The principle of inclusion-exclusion provides a formula to count the elements of a finite union of sets. It states that the number of elements in the union is equal to the sum of the sizes of the individual sets, minus the number of elements in their intersections.

Question: Determine if a graph is connected. **Answer:** A graph is connected if there exists a path between any two vertices. To check connectivity, one can use depth-first search or breadth-first search algorithms.
