**Q: What is the difference between structural and molecular formulas? A:** A structural formula shows the arrangement of atoms in a molecule, while a molecular formula only gives the number of each type of atom in the molecule. For example, the structural formula of methane is CH<sub>4</sub>, while its molecular formula is also CH<sub>4</sub>.

**Q: How do you determine the hybridization of a carbon atom? A:** The hybridization of a carbon atom is determined by the number of bonds it forms. A carbon atom that forms four single bonds is sp<sup>3</sup> hybridized. A carbon atom that forms one double bond and two single bonds is sp<sup>2</sup> hybridized. A carbon atom that forms two double bonds is sp hybridized.

**Q: What is the relationship between resonance and stability? A:** Resonance is a phenomenon in which a molecule has two or more valid Lewis structures. Resonance stabilizes molecules by spreading out the electron density over multiple atoms. The more resonance structures a molecule has, the more stable it is.
