The Drawworks and the Compound Unit 1 Lesson 6 Rotary

Drawworks

The drawworks is a critical component of a drilling rig, responsible for hoisting and controlling the drilling line. It consists of a power source, transmission system, and drum. The power source, typically an electric motor or diesel engine, drives the transmission system, which in turn rotates the drum. The drilling line is wound onto the drum, allowing the rig to hoist or lower the drill string.

Compound Unit

The compound unit is a mechanical assembly that combines a rotary table and a swivel. The rotary table rotates the drill string, while the swivel allows the drilling line to pass through while preventing fluid from leaking out. The compound unit is mounted on the drawworks, and the rotary table is driven by a chain or gear mechanism.

Questions and Answers

1. What is the main function of the drawworks? Answer: The drawworks hoists and controls the drilling line, allowing the rig to raise and lower the drill string.
