They have also shown how class and gender inequalities persist in schools and universities.

4. What are some key findings of critical research on education in Canada?

Critical research has found that:

- Indigenous students continue to face significant barriers in accessing and succeeding in education.
- Black and racialized students are overrepresented in discipline and special education programs and underrepresented in gifted programs.
- Women remain underrepresented in STEM fields (science, technology, engineering, and mathematics) and in leadership positions in education.
- People from low-income backgrounds are less likely to attain higher education credentials.

5. How can critical perspectives be used to improve education in Canada?

Critical perspectives can inform policy and practice to create a more just and equitable education system. By understanding the systemic barriers that marginalized groups face, educators and policymakers can develop strategies to address inequality and promote educational opportunities for all.
