Zetetic Astronomy: Earth Not a Globe

By Samuel Birley Rowbotham

1865 Hardcover

Question: What is Zetetic Astronomy?

Answer: Zetetic Astronomy is a pseudoscientific theory that claims the Earth is flat and not a globe. It was proposed by Samuel Birley Rowbotham in the 19th century.

Question: What evidence does Rowbotham present in his book?

Answer: Rowbotham's book, "Zetetic Astronomy," contains various experiments and observations that he claims support the flat Earth theory. These include the absence of curvature on the horizon, the behavior of water in a level canal, and the alleged impossibility of seeing distant objects from a great height.

Question: Are Rowbotham's claims supported by scientific evidence?

Answer: No, Rowbotham's claims are not supported by scientific evidence. His experiments either contain flaws or can be explained by alternative factors. Furthermore, numerous scientific observations and experiments have conclusively proven that the Earth is spherical.

Question: Why did Rowbotham believe the Earth was flat?

Answer: Rowbotham's flat Earth beliefs were likely influenced by religious and philosophical factors. He interpreted certain passages in the Bible literally and

rejected the heliocentric model of the solar system as contradicting these passages.

Question: What impact did Rowbotham's theory have?

Answer: Rowbotham's flat Earth theory gained some popularity in the 19th century, particularly among those who were skeptical of the scientific establishment. However, it has since been thoroughly discredited and is now considered a fringe belief. Scientific evidence overwhelmingly supports the spherical Earth model, and the flat Earth theory is widely rejected by scientists and the scientific community.
